

God City LLP & “God City”, Sindhudurg

An evidence-graded appraisal of a claimed 150-acre luxury township in the Mopa airport corridor of southern Konkan — what is actually verifiable, what the land could be worth, what can realistically be built and sold, and whether to pursue, investigate, negotiate, broker or walk away.

ENTITY	CLAIMED LAND	MAHARERA	PRELIMINARY VERDICT
ACF-3634 God City LLP · incorporated 6 Feb 2024 · RoC-Kanpur · Noida, UP	150 ac ≈60.7 ha · promoter claim, unverified, no survey numbers published	None found No registration located for the project or the promoter	Do not proceed ...on present evidence. Conditional path to re-engagement set out in Part 12.

One page on God City

The entity is real and easily verified. Almost nothing else is. What follows is the whole opportunity compressed onto a single page — and the single page is mostly empty boxes, which is itself the finding.

WHAT IS VERIFIED A ₹1 lakh LLP God City LLP, LLPIN ACF-3634, incorporated 6 February 2024 at RoC-Kanpur. Registered office in Noida, Uttar Pradesh. Total partner contribution ₹1,00,000. Two designated partners. Status active.	WHAT IS NOT The project itself No village, no survey or Gat number, no title chain, no NA order, no layout sanction, no MahaRERA registration and no land-ownership document has been published anywhere for this project.	CLAIMED SCHEME 150 ac township Luxury plots, villas and studios; Phase 1 of 22.5 acres; master plan attributed to architect Hafeez Contractor. All promoter claims, none independently corroborated.	ASKING PRICE ₹35,000 per sq yard · ₹3,889 per sq ft · a 250 sq yd plot ≈ ₹87.5 lakh before costs
WHERE IT IS (INFERRED) Mopa corridor, not the beach Triangulating the promoter's "30 minutes from Mopa" claim against the "Sawantwadi, Dist. Sindhudurg" caption on the master layout puts the site in the Banda–Insuli–west Dodamarg belt: roughly 30 min to Mopa airport, but 65–110 min to any beach. It is an airport-catchment location being marketed with beach imagery.	THE SINGLE BIGGEST RISK Western Ghats ESA The Centre re-issued the 7th draft Ecologically Sensitive Area notification on 27 July 2026. It bars new township and area-development projects of 50 hectares or more. A 150-acre scheme is 60.7 ha. The Bombay High Court has repeatedly ordered the Sawantwadi–Dodamarg corridor — 25 named villages — to be declared ESA.	THE SECOND BIGGEST Marketing without RERA Plots are being priced, a channel-partner programme is recruiting agents with "pricing and availability", yet no MahaRERA number can be found. Section 3 of RERA prohibits advertising or booking an unregistered plotted project; penalty up to 10% of project cost, 2% per month thereafter, and buyers may withdraw with full refund plus interest.	
150 ACRES IS NOT 150 ACRES 79.5 ac base-case net saleable plotted area — 53% of the headline number after roads, statutory open space, amenity space, utilities and unusable terrain	BASE-CASE ECONOMICS ₹1,108 cr gross development value; ₹359 cr post-tax profit; 27% unlevered project IRR over 10 years; ₹156 cr peak funding	WHAT THE LAND IS WORTH ₹0.68 cr per acre — residual land value at an 18% target return, base case. Bear case is negative: the project fails even if the land is free	BINDING CONSTRAINT Absorption ≈1,540 plots to sell into a district of 0.85 M people whose population fell 2.2% in the last census decade. Base case needs 10 selling years; the closest 150-acre comparable released about 8 acres in nine years.
BEAR –₹280 cr ₹2,200/sq ft, 80 plots a year. Not financeable — 55% sold after twelve years	BASE +₹359 cr ₹3,200/sq ft, 150 plots a year. 27% IRR — clears an 18% hurdle, with no margin for the ESA risk	BULL +₹778 cr ₹4,200/sq ft, 230 plots a year. Requires the corridor to behave like North Goa did after 2023	

Preliminary verdict Do not proceed on present evidence — and do not broker it at all This is not a judgement that the project is bad. It is a judgement that there is not yet enough disclosed to form any judgement, and that the gap between what is being asked of a buyer (₹87.5 lakh for a 250 sq yd plot) and what has been disclosed (a company number) is the widest this analysis has seen. Three facts are individually sufficient to stop at this stage: no identified land parcel, no MahaRERA registration while plots are priced and agents are recruited, and a live draft notification that would prohibit a township of this size if the villages fall inside it. Twelve specific documents, listed in Part 11, would move this from unratable to ratable in about three weeks and roughly ₹1.5–3 lakh of professional fees. Until they are produced, there is no opportunity here to price — only an unpriced option on someone else's disclosure.

NEXT STEP · FREE · 1 MINUTE Name the village Everything in Parts 5 to 8 resolves differently depending on the answer. A promoter who will not give it is not selling land.	NEXT STEP · FREE · 90 SECONDS Search MahaRERA maharera.maharashtra.gov.in, by project name and by promoter name. A number would resolve the second-biggest risk outright.	NEXT STEP · FREE · 30 MINUTES Check the ESA schedule Cross-refer that village against the 25-village corridor list in Part 5 and the 7th draft schedule. Do this before spending anything.
---	--	---

Evidence classes, and why they are kept apart

Most of what circulates about an unlaunched township is marketing. The discipline that makes this report useful is refusing to let a brochure number sit in the same sentence as a registry record. Every material statement below carries one of these tags.

TAG	MEANS	HOW IT IS TREATED IN THIS REPORT
OFFICIAL RECORD	From a statutory register, court order, gazette notification or government body.	Treated as fact. Used to anchor everything else.
VERIFIED	Corroborated by two or more independent sources.	Treated as fact, with the corroboration named.
REPORTED	Stated by a news outlet, trade publication or industry source.	Usable, but flagged where a single outlet is the only source.
PROMOTER CLAIM	Asserted by God City LLP, its websites, its brochure or its presenters.	Never treated as fact. Recorded as a claim to be tested.
MARKET LISTING	An <i>asking</i> price on a property portal or developer microsite.	Kept strictly separate from transaction evidence. Asking prices in India routinely sit 10–25% above registered values.
ASSUMPTION	An input this report has chosen where no data exists.	Always stated explicitly and always sensitivity-tested.
CONSTRUCTED ESTIMATE	A number this report has built from assumptions.	Never presented as a project figure. All modelling in Part 8 is of this class.
ANALYSIS	This report's own inference or judgement.	Reasoning shown so it can be disagreed with.
NOT FOUND	Searched for and not located in any public source.	Recorded as a gap, not as a negative finding — with the verification route named.

A LIMITATION YOU SHOULD KNOW ABOUT BEFORE READING FURTHER

This research was conducted through a network policy that permitted search-engine queries but blocked direct access to individual websites — including godcity.in, godcityprojects.in, the MahaRERA portal, the Maharashtra ready-reckoner database and corporate-records sites. Findings below therefore rest on what search indexes surfaced from those pages rather than on the pages themselves. Three consequences follow, and they matter:

First, “no MahaRERA registration found” means *no registration appeared in any search index* — strong evidence, but not the same as a nil return from the portal itself, which takes ninety seconds to run. **Second**, ready-reckoner rates for the relevant villages could not be retrieved, so the land-cost band used in the modelling is an assumption rather than a government figure. **Third**, promoter claims are quoted as the search index rendered them. Every one of these gaps is closable in a day by someone with an ordinary browser — and none should be closed by trusting the brochure.

What this report is trying to answer

What exactly is the opportunity? Is it a land trade, a development play, a plot purchase or a brokerage mandate? Each has a different answer.

What is the land actually worth? Not what it is priced at — what a rational developer could pay for it and still earn a return.

What can realistically be developed? After statutory deductions, terrain, and whatever the Western Ghats notification finally says.

What is the market opportunity? Who buys a ₹87 lakh plot 45 minutes from the sea in a district whose

population is falling, and how many of them are there each year?

What are the major risks — and which are fatal rather than merely expensive?

What are the returns, and how fragile? Under what assumptions does the answer flip sign?

What information is still missing, how much does it cost to obtain, and what would it change?

And finally — pursue, investigate, negotiate, invest, broker, develop, or walk away?

What God City LLP actually is

Start with the only part of this that can be checked against a register. It is a small, recently formed limited liability partnership based 1,400 kilometres from the land it is marketing.

ENTITY IDENTITY

Name	GOD CITY LLP
LLPIN	ACF-3634
Incorporated	6 February 2024 (≈2 yr 7 mo old)
Registrar	RoC-Kanpur, Uttar Pradesh
Registered office	A-118, 4th Floor, Noida, Gautam Buddha Nagar, Uttar Pradesh 201301
Total contribution	₹1,00,000
Designated partners	Two — recorded as Rakesh Kumar and Suresh Kumar; presented on the company's own site as Rakesh Chaudhary and Suresh Chaudhary
Status	Active
Evidence class	OFFICIAL RECORD via corporate-registry aggregators reflecting MCA filings

WHY EACH LINE MATTERS

₹1,00,000 of contribution. This is the partners' committed capital, not a measure of their wealth — but it is the entity's own balance sheet. A 150-acre township needs roughly ₹155 crore of peak funding on this report's base case. The vehicle currently in front of the market is capitalised at one lakh rupees. Either the land sits somewhere else, or the money does, or both.

RoC-Kanpur and a Noida address. The LLP is a Uttar Pradesh entity. The land is in Maharashtra. That is entirely legal and common, but it means the registered entity is almost certainly not the entity on the 7/12 extracts, and there must therefore be a landowning party, a development agreement or power of attorney, or a Maharashtra SPV that has not been disclosed.

February 2024. The LLP is younger than the project it is selling. It has no filed annual accounts of substance, no completed project, and no track record that can be tested by anyone.

Ownership, promoters and the link that is missing

What is actually being sold

The clearest picture of the scheme comes not from either website but from a 22-minute recording of a live sales presentation. It is worth studying carefully, because what a developer chooses to show — and chooses not to show — is itself evidence.

THE RECORDING

A screen capture of a Google Meet call, 22 minutes 45 seconds, device clock running 13:16 to 13:38. Three parties: a presenter labelled **Gaurav Chawla**, sharing his screen from a conference room with several colleagues; a remote participant, **Bhaskar**; and the recorder, camera off. The presenter opens a PDF from his own hard drive — the browser address bar reads a local file:///C:/Users/.../Downloads/GODCITY...pdf path — and walks through it. **PRIMARY SOURCE**

That detail matters. The brochure is not published. It exists as a file passed to intermediaries. Every number in it is therefore visible to prospective buyers and to no one else, which is the opposite of how a RERA-registered project works.

The brand. Gold serif wordmark with a lion motif.

"Welcome to a lifestyle fit for Gods." A neo-classical gateway.

"Live the European Way — every single day." The positioning in one line.

"Villas for a lavish life." Confirms villas as a product line alongside plots.

The axial garden and palace-scale clubhouse. An expensive promise.

"Master Layout". Wedge-shaped parcel; colour-coded plot bands; a central green.

Stills recovered from the recording by averaging 15–900 consecutive frames per static segment to suppress compression noise, then upscaling. Source resolution is 396×850, so headline type is legible but no numeric content on any slide can be read. **PROMOTER CLAIM** — these are marketing renders, not photographs of anything that exists.

What the deck asserts, and what it omits

ASSERTED

Scale	≈150 acres, “integrated luxury township”
Phase 1	22.5 acres “now open”
Products	Luxury plots · villas · studios / suites
Architect	Hafeez Contractor (master plan)
Location	“Sindhudurg growth corridor”; “New Goa”; “30 minutes from Mopa airport”
Price	From ₹35,000 per sq yard
Positioning	“Live the European Way”; “Own a piece of heaven on earth”; “A destination designed for today, built for tomorrow”
Layout caption	“Proposed Plotted Development at Sawantwadi, Dist. Sindhudurg” (partially legible)

OMITTED

- The village. Not named on either website, in any search result, or legibly in the deck beyond “Sawantwadi”.
- Survey or Gat numbers. None, anywhere.
- Who owns the land, and on what instrument God City holds it.
- Any NA order, layout sanction or zoning certificate.
- A MahaRERA registration number — the one thing a lawful plotted-project advertisement must carry.
- The split between plots, villas and studios, or how many of each.
- Payment terms, possession dates, or what the ₹35,000 per sq yard includes.
- Any evidence that Hafeez Contractor's practice has been engaged. The project does not appear on the architect's own site.

A NOTE ON THE ARCHITECT CLAIM

“Master planned by Architect Hafeez Contractor” is a strong signal to a buyer — it is one of the best-known names in Indian architecture. This report could find the claim only on God City's own blog. It does not appear on the architect's website or in any third-party coverage. That does not make it false; large practices do not list every commission, and early-stage schemes are often unlisted. But it is a claim that can be settled with a single email to the practice, and until it is settled it carries no evidential weight. **PROMOTER CLAIM**

Reading the master layout

The layout image is legible enough to read its morphology even though its dimension table is not. It shows a **wedge or fan-shaped parcel** — wide at the north-east, tapering to a narrow tail at the west — with a single curvilinear spine road entering from the western tail and a grand axial entry avenue leading to a palace-scale structure. Plot bands are colour-coded in at least three categories (orange, pink, blue), arranged in comb-like rows off the spine. A large central green occupies roughly the middle third. **ANALYSIS**

Three things follow from that shape, and all three cost money. **A single point of entry** at the narrow western tail means the whole scheme depends on one access road; if that road is not a public right of way of adequate width, the layout does not get sanctioned. **A long thin tail** generates road length that serves very few plots — poor infrastructure efficiency. **A palace-scale clubhouse and a large formal central green** are exactly the elements that push a plotted layout's saleable-area ratio down and its capital cost up. The visual language is selling Versailles; the arithmetic of Versailles is in Part 8.

Where is it, actually?

Nobody who is not already in the sales funnel can tell you. This is the single strangest fact about God City: a 150-acre township is being priced, brochured and channel-partnered without a published address.

Triangulating the site from three inconsistent signals

SIGNAL	SOURCE	WHAT IT IMPLIES
"Sindhudurg growth corridor"	PROMOTER godcity.in	District-level only. Sindhudurg is 5,207 km². Narrows nothing.
"Proposed Plotted Development at Sawantwadi, Dist. Sindhudurg"	PRIMARY caption on the master layout in the recording	Points to Sawantwadi <i>taluka</i> — large, stretching from NH-66 east into the Western Ghats.
"New Goa", "30 minutes from Mopa airport"	MICROSITE godcityprojects.in	Mopa is at 15.744°N, 73.858°E. A genuine 30-minute drive reaches Banda, Insuli, Patradevi and western Dodamarg — not Sawantwadi town, which is 40–45 km and closer to an hour.

The two specific signals are in tension. Reconciling them gives the envelope on the map below: the **Banda-Insuli-western Dodamarg belt of southern Sawantwadi taluka**, along or just off NH-66 between Patradevi and Sawantwadi town. **ANALYSIS** If the site is in fact near Sawantwadi town, the "30 minutes from Mopa" claim is wrong by roughly double — which is itself the finding, because that claim is the whole of the "New Goa" proposition.

God City sits in the Mopa airport catchment, not the Sindhudurg beach belt

Schematic map from approximate coordinates — not survey-grade. The gold envelope is this report's inference of where the site lies, triangulated from the promoter's '30 minutes from Mopa' claim and the 'Sawantwadi, Dist. Sindhudurg' caption legible on the master layout in the recording. No survey or Gat number for the land has been published anywhere.

The gold polygon is an inference, not a disclosure. Note what the geography says: the site is an *airport-catchment* location, close to Mopa and the Goa border, but 38–75 km from every beach the brochure's connectivity slide lists.

WHY THE ADDRESS MATTERS MORE THAN ANYTHING ELSE IN THIS REPORT

The village name is not a detail — it is the master key. It determines whether the land sits inside the 25-village Sawantwadi-Dodamarg corridor the Bombay High Court has ordered be declared ecologically sensitive; whether the Regional Plan zones it for development; whether it is hill-slope or private forest; and whether the 7/12 extracts can be pulled at all. **Every material valuation question in Parts 5 to 8 resolves differently depending on which village this is.** The promoter can answer it in one sentence, and has not.

Connectivity, measured honestly

Drive times from the probable site

Constructed estimates from the inferred location envelope, not measured from a surveyed point. The site is an airport-corridor location with roughly an hour of driving to any beach — it is not beachfront and should not be valued as if it were.

Drive times estimated from the inferred envelope. Treat them as ±25% until the site is identified.

WHAT THE LOCATION GENUINELY HAS

Proximity to the only airport in this region that matters. Mopa handled **5.40 million passengers in FY2025-26**, up 15.2% on 4.66 million the year before. It is the gateway to Goa and it is roughly half an hour away. **REPORTED**

A position on NH-66, which after fifteen years of construction is over 90% four-laned through Sindhudurg with a state target of May 2026 for completion. **REPORTED**

The terminus of the sanctioned Nagpur-Goa Shaktipeeth Expressway is **Patradevi** — about twelve kilometres from the inferred site. If that road is built, this corridor becomes the road head for central Maharashtra. **OFFICIAL RECORD**

WHAT IT DOES NOT HAVE

A beach. The nearest is Redi at roughly 65 minutes; Vengurla 75; Malvan and Tarkarli around 110. A brochure whose connectivity slide is dominated by a coastal map with eight beach pins is selling proximity the drive time does not support.

A working local airport. Sindhudurg (Chipi) handled **73,022 passengers in FY2025-26** — about 3 flights a day on a single carrier to Pune, Hyderabad and Bengaluru. The much-promoted Navi Mumbai route had not started as of August 2026. Mopa carries 74 times Chipi's traffic. **REPORTED**

A town. Banda and Sawantwadi are small. There is no hospital, school or retail base within the catchment that would support permanent occupation, which is why this is a second-home product whether or not it is marketed as one.

Two airports, one of them decisive

Air access is the single most important demand driver for a second-home product in this corridor.

The entire connectivity case rests on the left-hand bar. If Mopa's growth stalls, the corridor's land thesis stalls with it.

The catalyst case, graded

Every land pitch in this corridor runs on the same four words: Mopa, expressway, highway, Goa. Two of those are real and already delivered. Two are lines on a map with a decade of history behind them and no earth moved.

Catalysts, sorted by how real they actually are

Bars before 2010 are truncated. Dates for unbuilt projects are indicative ranges, not commitments — the NH-66 four-laning took fifteen years from start to near-completion, which is the right base rate to apply to everything in grey.

Colour encodes status, not importance. The one red bar is not a catalyst at all — it is the regulatory process that could stop the project outright, and it is live right now.

PROJECT	STATUS	WHAT IS ACTUALLY ESTABLISHED, AND WHAT IT MEANS HERE
Manohar Intl. Airport, Mopa	DELIVERED	Opened January 2023. FY2025-26 traffic 5.40 M passengers , +15.2% year on year, against Phase 1 design capacity of 4.4 M — already over-subscribed. Phased capacity runs 5.8 M → 9.4 M → 13.1 M, ultimately 35 M. Accumulated losses of about ₹331 crore are reported despite rising revenue — normal for a greenfield concession, but worth noting before treating expansion as automatic. The single genuine, delivered, measurable catalyst in the corridor.
NH-66 four-laning	NEAR COMPLETE	Started 2011. Sindhudurg and Ratnagiri sections reported over 90% complete; Maharashtra-wide target of May 2026 excluding the Mangaon and Indapur bypasses. Mumbai–Goa drive time to fall from about twelve hours to six. Fifteen years from start to near-finish is the base rate to apply to everything below.
Revas–Redi Coastal Highway (MSH4)	BUILDING	Upgrade and widening of the 523 km coastal road; 7 of 9 creek bridges awarded. Benefits the coastal belt — Malvan, Vengurla, Devgad — more than an inland airport-corridor site.
Shaktipeeth Expressway Nagpur (Pawnar) → Patradevi	SANCTIONED	Final notification issued; land survey across 298 villages; ₹20,787 crore provision; about 8,000 ha to acquire. Route lengthened from 802.6 km to 856.8 km and re-aligned on 1 April 2026 after farmer protests in Kolhapur and Sangli. Stated completion 2028-29. Terminates twelve kilometres from the inferred site — the highest-leverage unbuilt project for this land, and the most exposed to acquisition politics.
Konkan Expressway Greenfield, Panvel → Patradevi	ANNOUNCED	388.44 km, six-lane, access-controlled; ₹68,920 crore including land; 4,205 hectares required. Revised DPR completed December 2024; environmental clearance applied for and <i>additional details sought</i> by the assessment authority — still pre-clearance, pre-acquisition, pre-award. A 2030s possibility, not a 2020s catalyst. Pitches that price it in today are valuing a decade of execution risk at zero.
Western Ghats ESA notification	LIVE THREAT	Not a catalyst — a constraint. Covered in full in Part 5.

THE HONEST VERSION OF THE INFRASTRUCTURE STORY

One airport, delivered, growing fast, half an hour away. One highway, nearly finished after fifteen years. Everything else is a line on a map. That is still a *good* story — materially better than most of coastal Maharashtra — but it is a one-catalyst story, and the catalyst is in another state. What Sindhudurg has is **proximity to Goa's growth**, not growth of its own. [ANALYSIS](#)

The legal path from paddy field to plot

A plotted township in a Maharashtra Regional Plan area passes through ten gates. God City is demonstrably operating at gate nine. No evidence could be found that it has passed gate one.

THE GATES BETWEEN A PADDY FIELD AND A SELLABLE PLOT		EVIDENCE GOD CITY HAS PASSED THE GATE
1	Title diligence 30-year search, 7/12 & mutation entries, encumbrance, litigation, tenancy	No document located
2	Sec. 63 / 63-1A route A non-agriculturist cannot buy agricultural land. Either Collector permission, or the Integrated Township Project route under Sec. 63-1A	No document located
3	Land acquisition Registered sale deeds or a registered development agreement with landowners	No document located
4	Zoning under the Regional Plan Site must fall in a zone permitting residential development; green / no-development / hill zones do not	No document located
5	Environmental gateways Western Ghats ESA · private-forest and hill-slope checks · CRZ if any tidal creek is within 50 m	No document located
6	NA order — Collector Conversion from agricultural to non-agricultural use. NA tax, conversion premium, development charges	No document located
7	Layout sanction Tentative layout recommended, demarcated by Land Records, then final approval. 10% open space, 5% amenity space, road standards	No document located
8	MahaRERA registration Mandatory before any advertising, marketing, booking or sale of a plotted project over 500 sq m or 8 plots	No document located
9	Marketing and sale Only lawful after step 8	HAPPENING NOW — WITHOUT STEP 8
10	Infrastructure and conveyance Roads, water, power, STP; plot-wise conveyance; completion certificate	No document located

"No document located" is a statement about what is public, not a finding that the document does not exist. Any of these can be produced on request — and the request is the whole of the next step.

Gate 2 — who is even allowed to buy this land

Under **Section 63 of the Maharashtra (formerly Bombay) Tenancy and Agricultural Lands Act, 1948**, a transfer of agricultural land to a person who is not an agriculturist or agricultural labourer is invalid. This is not a technicality; it invalidates the transfer. **OFFICIAL RECORD** There are three lawful routes around it, and each leaves a different paper trail: a **Collector's permission** under the proviso, granted case by case; **Section 63-1A**, which permits transfer to a non-agriculturist for bona fide industrial use or for an **Integrated Township Project** — the term substituted for "Special Township Project" by Maharashtra Act 1 of 2016; or the **2016 carve-out**, which lifts the bar where the land is inside municipal limits, or inside a Special Planning Authority's jurisdiction and already allocated to non-agricultural use in the Regional Plan.

At roughly 150 acres — **60.7 hectares** — God City comfortably exceeds the **40-hectare minimum** for an Integrated Township Project under UDCPR 2020, so the ITP route is genuinely open to it. That is a real advantage of the scheme's scale: it would also unlock additional built-up area on premium (up to 70% of basic FSI in the 40-200 ha band) and relief from the Regional Plan's normal amenity-space obligation. **ANALYSIS**

But it cuts both ways. If the land was aggregated from farmers *without* Section 63-1A permission or a Collector's order — through agriculturist nominees, unregistered agreements to sell, or powers of attorney — the chain of title is defective at its root, and no amount of downstream approval cures it. This is the most common structural defect in Konkan land aggregation, and it is invisible from outside.

Gate 5 — the Western Ghats notification

THIS IS THE FINDING THAT CHANGES THE WHOLE VALUATION

On **27 July 2026** the Union Environment Ministry re-issued the seventh draft notification declaring an Ecologically Sensitive Area across **56,825.7 km²** of the Western Ghats, of which **17,340 km²** falls in Maharashtra. Objections close sixty days later — in late September 2026, as this report is written.

OFFICIAL RECORD

Among the activities the draft **prohibits**: new buildings of 20,000 m² or more, and **township and area-development projects of 50 hectares or more, or 1,50,000 m² of built-up area or more.**

God City, at a claimed 150 acres, is 60.7 hectares. That is above the threshold. If the project's villages fall within the final notified ESA, a township of this size is not a permission problem — it is a prohibited activity.

The probability is not remote. Since 2011 the Bombay High Court has repeatedly directed that the **Sawantwadi-Dodamarg corridor** be declared ecologically sensitive: on a 2011 Awaaz Foundation petition the court held in 2013 that the corridor be protected as an ESA; Vanashakti petitioned again in 2014; and in 2024 the court directed the state to submit its ESA proposal within four months, with the Centre to begin the declaration process within two months of receiving it. The corridor comprises **25 named villages across Sawantwadi and Dodamarg talukas** — precisely the belt where this report's location analysis places the site. OFFICIAL RECORD

TALUKA	VILLAGES NAMED IN THE CORRIDOR PROPOSAL
Sawantwadi	Asaniye · Padwe Majgaon · Bhalawal · Tamboli · Saramale · Nevli · Dabhil · Otawane · Konshi · Gharpi · Udeli · Kesri-Phansawade
Dodamarg	Kumbral · Panturli · Talkat · Zolambe · Kolzar · Shirwal · Ughade · Kalane · Bhikekonal · Kumbhawade · Khadpade

The one-question test. Ask the promoter to name the village. If it appears above, stop. If it does not, the exposure drops sharply — but the Wildlife Institute of India has separately identified a wider list of roughly 35 villages as critical to corridor connectivity, and the Centre and the states remain in open disagreement over the final boundaries, with the expert committee's deadline now pushed to 2027.

Two mitigations are worth naming, because a competent developer will raise them. **First**, the state has resisted including Dodamarg taluka in its own ESA submissions, so political pressure runs against inclusion. **Second**, phasing below the threshold — a 22.5-acre Phase 1 is 9.1 ha — is the standard structuring response. Neither is a safe harbour: the notification is a central instrument the state cannot override, and contiguous phases under common control are normally aggregated. ANALYSIS

Gates that turn out to be minor

CRZ. The Coastal Regulation Zone notification of 2019 extends along tidally influenced water bodies only to 50 metres landward of the high tide line, or the width of the creek, whichever is less, up to the point where dry-season salinity falls below 5 ppt. An inland site in the Banda-Sawantwadi belt is 20–35 km from the sea. Unless a parcel boundary abuts a tidal reach of the Terekhol, **CRZ is a low-probability, low-impact risk here** — and it is one of the few risks that can be cleared from a map. ANALYSIS

Two adjacent checks are *not* minor and belong in the same diligence pass: whether any part of the holding is recorded as **private forest** or falls under hill-slope restrictions, both of which are common on Konkan ghat-edge land and both of which sterilise the affected area entirely.

Gate 8 — the MahaRERA problem

Section 3 of the Real Estate (Regulation and Development) Act, 2016 prohibits a promoter from advertising, marketing, booking, selling or offering for sale any plot in a real estate project without first registering it with the authority. For plotted development the trigger is low: land over 500 m², or more than eight plots. A 22.5-acre phase is roughly 91,000 m². **OFFICIAL RECORD**

The penalties are not nominal. Advertising or marketing an unregistered project attracts a penalty of **up to 10% of the estimated project cost**; continued failure adds **up to 2% per month**; sustained violation can attract imprisonment of up to three years. And an allottee who has booked into an unregistered project is entitled to withdraw and recover the full amount with interest and compensation.

WHAT IS OBSERVABLE

- A public asking price of ₹35,000 per sq yard.
- A stated “Phase 1 now open” of 22.5 acres.
- A channel-partner recruitment programme offering agents access to “key project briefs, pricing, availability, and approved sales assets”.
- A sales presentation being delivered to prospects with a master layout and product slides.

Each of these is, on its face, marketing a plotted project.

WHAT COULD NOT BE FOUND

- Any MahaRERA registration number for a project named God City. **NOT FOUND**
- Any MahaRERA registration naming God City LLP as promoter. **NOT FOUND**

Every comparable project this report identified in the same corridor carries a number: Yog City Phase 1 is P52900001889; Axis Lake City is P52900026853. The P529 prefix is Sindhudurg's.

Same corridor, same product, same scale — one difference

Yog City at Maneri is the closest analogue: a 153-acre Dodamarg township in the same Mopa corridor, launched around 2017, which registered and released roughly 8 acres in its first phase. Every comparable found carries a MahaRERA number. God City does not.

STATE THIS PRECISELY, BECAUSE THE DISTINCTION MATTERS

This report searched and found no registration. It did **not** query the MahaRERA portal directly — the research environment blocked it. “No registration found” is therefore strong circumstantial evidence, not proof. Anyone considering this project should run the search themselves at maharera.maharashtra.gov.in under both the project name and the promoter name. It takes ninety seconds and it is the highest-value ninety seconds in the entire diligence process. If a number comes back, a great deal of this report's concern dissolves. If it does not, the project is being marketed unlawfully, and that fact tells you everything you need to know about how the rest of it is being run.

150 acres is not 150 acres

The most common error in appraising a plotted township is to multiply headline acreage by headline price. Roughly half the land never gets sold — it becomes road, statutory open space, amenity reservation, infrastructure footprint, or it is simply unbuildable.

From 150 headline acres to sellable inventory

Base case. Deductions are constructed estimates benchmarked to UDCPR 2020 layout rules, not disclosed project figures.

Base case. Every deduction is a constructed estimate benchmarked to UDCPR 2020 requirements — none is a disclosed God City figure.

WHERE THE DEDUCTIONS COME FROM

Roads and circulation, 20%. Typical for a plotted layout. The master layout's long western tail and single spine road argue for the higher end of the normal 15–22% range.

Recreational open space, 10%. UDCPR requires 10% of the layout area to be earmarked as recreational open space, provided so far as possible in one place. **OFFICIAL RECORD**

Amenity space, 5%. Required for layouts of 20,000 m² or more. Note the ITP carve-out: for an Integrated Township Project this obligation is *not* mandatory, which is one reason the ITP route is worth pursuing — it is the single largest recoverable deduction on this page.

Clubhouse, STP, utilities, entry, 4%. The deck shows a palace-scale clubhouse and a formal axial approach. Both consume land that cannot be sold.

Terrain, buffers, structures, 8%. Konkan ghat-edge land routinely carries streams requiring buffers, slopes too steep to plot, HT line corridors and existing houses or wadis.

HOW MUCH THIS SINGLE ASSUMPTION IS WORTH

SALEABLE RATIO	NET ACRES	PLOTS	GDV AT ₹3,200/SQ FT
45% bear	67.5	1,307	₹941 cr
53% base	79.5	1,539	₹1,108 cr
60% bull	90.0	1,742	₹1,254 cr

Fifteen percentage points of saleable ratio is **₹313 crore** of gross development value — more than four times the entire assumed land cost. This is why “how many acres are actually sellable” is a better first question to a promoter than “what is the price”.

ASK FOR THIS, NOT FOR THE ACREAGE

The sanctioned layout plan with the area statement: gross area, area under roads, recreational open space, amenity space, and **net plottable area**, plot-numbered. Every genuine plotted project has this document because no layout is sanctioned without it. A promoter who cannot produce it does not have a sanctioned layout.

Who buys, and how many of them are there

Sindhudurg is the least populous district in Maharashtra, and in the last census decade its population *fell*. Any 1,500-plot scheme here is, by arithmetic, selling entirely to people who do not live there.

DISTRICT POPULATION

8.50 lakh

2011 census — the least populous district in Maharashtra

DECADAL GROWTH

-2.21%

2001–2011. An outright decline, driven by out-migration

POPULATION DENSITY

163/km²

Against a Maharashtra average of 365

That is the demand-side fact that no brochure in this corridor mentions. It does not make the market unviable — second-home markets never run on local demand — but it does mean the entire absorption case rests on discretionary buyers from elsewhere who have no obligation to buy in any given year. ANALYSIS

Segment shares are this report's estimate, built from the pattern of demand reported across the Sindhudurg second-home market. They are directional, not measured.

What market commentary reports — and it should be read with care, because most of it is written by firms selling land in this corridor — is that developers from Pune, Mumbai and Goa have begun acquiring large tracts for plotted townships and boutique resorts; that enquiries have risen from UK, UAE and Singapore-based Maharashtran NRIs; and that Sindhudurg plot rates appreciated around 68% between 2018 and 2025 with a further 40–50% projected by 2030. MARKET COMMENTARY Those appreciation figures come from developer-affiliated sources and should be treated as marketing, not data. The verifiable underlying driver is real enough: Mopa's passenger traffic, which is measured and growing.

Price: what is asked, and what is actually known

Where the God City ask sits against the evidence

Asking prices and transaction evidence are kept on separate lines.
Only one genuine transaction data point was located.

Note how little of this chart is transaction evidence. One data point.

EVIDENCE	₹/SQ FT	₹/SQ YD	CLASS AND CAVEAT
Raw agricultural land, Sawantwadi belt	69 – 138	620 – 1,240	ASSUMPTION ₹30–60 lakh/acre. Ready-reckoner rates could not be retrieved; this band must be replaced with the actual village rate.
Pernem / Mopa raw land, Goa side	465 – 1,115	4,180 – 10,030	REPORTED ₹5,000–12,000 per m². Government base rates in Pernem taluka span ₹1,500–15,000 per m².
Small NA plot near Mopa	743	6,690	REPORTED TRANSACTION ₹20 lakh for 250 m². The only genuine transaction data point located in this entire exercise.
Yog City Phase 1, Dodamarg	300 – 450	2,700 – 4,050	LEGACY LISTING ₹6.46–9.69 lakh for 2,153 sq ft+. Reflects a c.2017 launch, not today.
Axis Lake City, Dodamarg	2,478 – 4,336	22,300 – 39,020	ASKING Two portals quote ₹39.99 lakh and ₹69.98 lakh for the same 1,614 sq ft. The spread is the story: this is not a priced market.
Premium gated plots, Dodamarg	4,444	40,000	ASKING ₹1.40 crore for 350 sq yd.
GOD CITY	3,889	35,000	PROMOTER CLAIM Single microsite. No payment plan, inclusions or plot schedule disclosed.

READING THE LADDER

The God City ask is **not an outlier**. It sits below the ₹40,000/sq yd asking price for premium gated plots in Dodamarg and inside the Axis Lake City range. On a pure price-positioning basis it is defensible. [ANALYSIS](#)

Two things qualify that. **First**, the comparables are 18 km from Mopa in Dodamarg; the inferred God City site is 22 km but in a different taluka, and none of these projects is strictly like-for-like. **Second**, and more important — **every number in the upper half of this chart is an asking price**. The only actual transaction located sits at ₹743 per sq ft, a factor of five below the cluster of asks. That gap may be entirely explained by product difference — raw NA plot versus amenitised gated township — which is the honest reading. It may also be telling you the asks are not clearing. From outside the two are indistinguishable, and the way to tell them apart is to pull registered sale deeds for the comparables from the Sub-Registrar at Sawantwadi or Dodamarg, which anyone can do for a few hundred rupees.

Supply and absorption — the constraint nobody prices

Absorption is the binding constraint, not price

Even the bull case needs eight selling years. Sindhudurg's resident population is 0.85 M and shrinking, so almost every buyer has to come from outside the district.

Cumulative plots sold under each scenario. The dashed line is total inventory at a 250 sq yd average plot.

At a 250 sq yd average plot, 79.5 net saleable acres is roughly **1,540 plots**. Selling that into a non-local, discretionary buyer pool requires a sustained rate of 150 plots a year for a decade — a plot sold every 2.4 days, every week, for ten years, in a district with 8.5 lakh residents. **CONSTRUCTED ESTIMATE**

WHAT THE CLOSEST COMPARABLE ACTUALLY DID

Yog City at Maneri, Dodamarg is the single best analogue available: a 153-acre township by JP Group, 5 km from the Goa border, in the same Mopa corridor, selling the same product. Its Phase 1 — MahaRERA P52900001889 — comprised **80 NA plots across 24,000 m², about 8 acres**, and that registration number's low sequence places the launch around 2017. The project also operates a resort and reports that its luxury villas and studio apartments sold out. **REPORTED**

So: a 153-acre township in this corridor, launched roughly nine years ago, with an operating resort as a demand generator, released its first phase as 8 acres. Whatever the reason — deliberate phasing, capital discipline, or absorption reality — **that is the observed pace of this market at this scale**. God City's claimed Phase 1 is 22.5 acres, nearly three times Yog City's, from a promoter with no delivery record and no resort. **ANALYSIS**

THE SUPPLY ARITHMETIC

If God City delivers 150 acres and Yog City delivers its remaining 145, this corridor is carrying roughly **3,000 plots of plotted-township inventory** from two schemes alone, before counting Axis Ecorp's projects and the dozens of smaller NA layouts that portals list across Dodamarg and Sawantwadi. Nothing in the observable demand data supports absorbing that in a decade. Supply overhang is not a tail risk in this corridor — it is the base case, and it is why the bear scenario in Part 8 shows the project failing on absorption rather than on price.

THE DISCIPLINE THAT SEPARATES A BUYER FROM A MARK

Never accept an asking price as a valuation input. In Indian land markets asking prices routinely sit 10–25% above registered values, and in thin second-home markets the gap is wider and the time-to-sale is measured in years. The question to ask a promoter is not “what is your price” but “**show me the last five registered sale deeds in this project or the one next door**”.

What the numbers do, and what they cannot do

READ THIS BEFORE ANY FIGURE IN PART 8

God City has disclosed one number: ₹35,000 per sq yard. Everything else here — every cost, timeline, acre and rupee of profit — is a **constructed estimate** built on assumptions stated and tested in full. It is not a valuation of God City. It is a model of *what a 150-acre plotted township in this corridor would have to look like* to be worth doing, against which God City can be measured once it discloses anything.

Base-case assumptions, in full

INPUT	BEAR	BASE	BULL BASIS
Gross land	150 ac	150 ac	150 ac Promoter claim, held constant
Net saleable ratio	45%	53%	60% UDCPR deductions, Part 6
Achieved price, ₹/sq ft	2,200	3,200	4,200 Base is an 18% discount to the ₹3,889 ask
Raw land, ₹ lakh/acre	60	40	25 ASSUMPTION — ready-reckoner rates unavailable
Acquisition frictions	25%	18%	18% Stamp duty, registration, legal, aggregation
Approvals & premiums, ₹ lakh/acre	16	10	10 NA conversion, ITP sanction, layout, development charges
Site infrastructure, ₹ cr/acre	1.60	1.30	1.10 Roads, drainage, water, STP, electrical — hilly terrain premium
Amenities & clubhouse, ₹ cr	95	80	70 The deck promises a palace; this is what a palace costs
Marketing / selling / overhead	5.5% / 5.0% / 5.0% of revenue		Destination product; heavy top-of-funnel spend
Absorption, plots/year	80	150	230 Yog City's observed pace anchors the low end
Pre-launch approval lag	3 yr	2 yr	2 yr From land control to first lawful sale
Project life modelled	12 yr	10 yr	9 yr Tail inventory exited in bulk at a discount
Tax			25% Applied to positive pre-tax profit

Financing is modelled without compounding: equity funds the first ₹150 crore of cumulative deficit and only the excess is charged simple interest. A compounding facility on a deficit that never turns — which is what the bear case is — produces a meaningless number, so the model flags that case as **unfinanceable** instead.

The base case, line by line

BASE CASE	₹ CRORE	% OF GDV
Gross development value	1,108	100.0
Revenue realised (78% of GDV sold in 10 yr; tail exited at 70%)	1,035	93.4
COSTS		
Land, all-in	71	6.4
Approvals and premiums	15	1.4
Site infrastructure	195	17.6
Amenities and clubhouse	80	7.2
Marketing	57	5.1
Selling and channel	52	4.7
Overheads and project management	52	4.7
Consultants and design	10	0.9
Contingency	23	2.1
Finance	2	0.2
Total cost	556	50.2
Profit before tax	479	43.2
Tax at 25%	(120)	
Post-tax profit	359	32.4

HEADLINE METRICS

Net margin on revenue	34.7%
Profit on cost	64.8%
Unlevered project IRR, post-tax	26.8%
Peak funding requirement	₹156 cr
Plots to sell	1,539
Years to sell out at 150/yr	10.3

A 27% unlevered IRR clears a typical 18% hurdle with room to spare. On these assumptions **the scheme works** — which should be stated plainly before the caveats: the assumptions are this report's, not the promoter's; the model assumes clean title, granted approvals and a favourable ESA outcome; and it assumes a developer able to deploy ₹156 crore of peak funding. None of that is established.

The funding hole before the first rupee comes back
Pre-finance cumulative cash. Land, approvals and enabling infrastructure all land before Phase 1 revenue.

Which assumptions actually matter

What actually moves the outcome

One-at-a-time swing on post-tax profit, base case held elsewhere. Price and absorption dominate; land cost barely registers.

Post-tax profit swing from moving one input across its plausible range, all others held at base.

The ranking is the useful output. **Selling price and absorption dominate everything else combined.** Land cost — the number most negotiations obsess over — moves post-tax profit by ₹86 crore across a ₹20-70 lakh per acre range, while price alone moves it by ₹335 crore. **A buyer who negotiates hard on land price and soft on absorption realism has optimised the wrong variable.**

ANALYSIS

The project lives or dies on two numbers

Unlevered post-tax project IRR. Everything at or below the 18% hurdle is shown in warm tones.

Unlevered post-tax project IRR across the two variables that matter. Warm cells fail an 18% hurdle.

The heatmap sets the real test. At the ₹3,889 ask the project must move **about 85 plots a year** to clear 18%; at a more realistic achieved ₹3,200 it needs **about 112**; at ₹2,800, about 134. Read the other way: if absorption settles at Yog City's observed pace — call it 70-90 plots a year — then only the very top of the price range gets near the hurdle at all (70 plots at ₹4,400 returns 17.8%, still short; 90 plots at ₹4,200 returns 20.9%). **The bottom-left quadrant is where this project most plausibly lives, and almost all of it fails.**

Three futures

Three futures for a 150-acre plotted township

Constructed estimates. Scenario definitions and every input assumption are listed in the assumptions table.

BEAR REQUIRES

Absorption at Yog City's pace, price compression to ₹2,200, land bought at the top of the band, hilly ground. None of that is exotic — it is the corridor behaving as it has for nine years.

BASE REQUIRES

A competent developer, clean approvals, 150 plots a year for a decade, price within 18% of today's ask — and, quietly, an ESA notification that excludes the site.

BULL REQUIRES

Mopa compounding, Shaktipeeth actually landing at Patradevi, land at ₹25 lakh an acre, 230 plots a year. Possible. Not a plan.

So what is the land worth?

What the land is worth to a developer

Residual land value: the most a buyer can pay for the 150 acres today and still hit the target return. The gold band is the assumed raw-land cost of ₹30–60 lakh/acre. Below zero the deal fails even if the land were free.

Residual land value inverts the model: instead of assuming a land price, it asks what a developer could pay today and still earn a target return. At an **18% target**, the base case supports **₹0.68 crore per acre** — about ₹68 lakh, or roughly ₹1.7 lakh per guntha. The bull case supports ₹2.08 crore. The bear case is **negative**: at bear-case absorption and pricing, the project destroys value even if the land is a gift. **CONSTRUCTED ESTIMATE**

Note what this does *not* say. It does not say the land is worth ₹68 lakh an acre — it says that is the ceiling a developer targeting 18% could pay *on this report's assumptions*. But the shape is robust: land value here is almost entirely a function of whether the development can be executed and absorbed. At this stage **you are not buying land, you are buying execution**.

And if you are simply buying a plot?

Most people who see this brochure are not developers. They are being offered a plot at ₹35,000 per sq yard. That is a different question with a harder answer.

What a plot buyer at ₹35,000/sq yd has to believe

A 250 sq yd plot costs ₹94.5 lakh all-in after 8% acquisition costs. These are the exit prices that must clear, net of 3% selling cost.

A 250 sq yard plot at the quoted ask costs ₹87.5 lakh, or ₹94.5 lakh all-in once roughly 8% of stamp duty, registration and legal costs are added. Over a seven-year hold, net of 3% selling costs, the exit prices required are:

TARGET RETURN	EXIT PRICE NEEDED	EXIT VALUE OF THE PLOT	MULTIPLE OF TODAY'S ASK	IMPLIED PRICE CAGR
8% — roughly a fixed deposit	₹66,786/sq yd	₹167 lakh	1.9×	9.7%
12% — roughly an equity index	₹86,148/sq yd	₹215 lakh	2.5×	13.7%
15% — what illiquid land should pay	₹103,659/sq yd	₹259 lakh	3.0×	16.8%
18% — compensation for this risk profile	₹124,135/sq yd	₹310 lakh	3.5×	19.8%

WHAT A PLOT BUYER IS ACTUALLY UNDERWRITING

To earn a return that merely compensates for holding an illiquid, undeveloped, non-income-producing asset for seven years, this plot must **treble** — from ₹35,000 to about ₹1,04,000 per square yard. That is roughly ₹11,500 per square foot, which is Panaji apartment territory, for bare land forty-five minutes from the nearest beach.

Not impossible — North Goa did something like it after Mopa opened. But it requires finding, seven years hence, another buyer willing to pay three times today's price, in a corridor where this report could locate exactly one registered transaction. **The return depends entirely on exit liquidity that does not currently exist.**

THE INTERMEDIATE CASE: IS THERE A LAND TRADE?

A third possibility is worth naming: buying land in this corridor *outside* God City, at raw-land prices of ₹30–60 lakh an acre, and holding it. That trade has a far better risk profile than either developing or buying a plot — it requires no approvals, no absorption, no promoter, and no counterparty beyond the seller. It is also the trade the residual land value in this section implicitly endorses: if a developer can pay ₹68 lakh an acre at an 18% return, a patient buyer at ₹40 lakh has bought at a discount to development value. **The corridor may be a better idea than the project.**

ANALYSIS

What can go wrong, ranked

Risk register, plotted

Probability and impact are this report's judgement, not measured values. Numbers key to the list on the right; the full register with mitigations and verification routes follows in the risk section.

#	RISK	WHY IT MATTERS	HOW TO VERIFY	WHAT WOULD CHANGE THE CONCLUSION
1	Western Ghats ESA captures the site	Draft notification prohibits new township projects of 50 ha or more. The scheme is 60.7 ha. Not a permission problem — a prohibition.	Get the village name; check it against the 25-village corridor list and the 7th draft schedule. File an RTI with the Sindhudurg Collector if the promoter will not say.	A village outside both the corridor list and the notified ESA drops this from fatal to moderate. Confirmation inside it ends the project.
2	Marketing without MahaRERA registration	Section 3 violation: penalty up to 10% of project cost, 2% per month continuing, buyers entitled to full refund with interest.	Search maharera.maharashtra.gov.in by project name and by promoter name. Ninety seconds.	A valid registration number resolves this entirely and materially improves the promoter assessment.
3	Absorption far below plan	The binding constraint. At 80 plots a year the project loses ₹280 cr and is unfinanceable.	Pull registered sale deeds for Yog City and Axis Lake City from the Sub-Registrar; count deeds per year.	Evidence of 100+ registered plot sales a year across the corridor would support the base case.
4	Title and aggregation defects	150 acres in Konkan is typically 40–120 separate 7/12 holdings, often with undivided family shares, tenancy entries and minors' interests.	30-year title search by a Sindhudurg advocate; 7/12 and mutation extracts for every Gat number; search of the Sub-Registrar index.	A clean search opinion on a complete, contiguous holding is the single most valuable document the promoter could produce.

The register continues overleaf, with risks 5 to 14.

Risk register, continued

#	RISK	WHY IT MATTERS	HOW TO VERIFY	WHAT WOULD CHANGE THE CONCLUSION
5	Promoter capacity	A ₹1,00,000 LLP, incorporated Feb 2024, no delivered project, facing a ₹156 cr peak funding requirement.	Ask for audited accounts, the funding plan, and the address and completion certificate of one delivered project.	A named institutional funding partner or a credible delivered project changes this substantially.
6	Section 63 land-purchase bar	Transfer of agricultural land to a non-agriculturist is invalid without Collector permission or the Sec. 63-1A / ITP route.	Inspect the sale deeds and the accompanying permission order.	A Sec. 63-1A order or ITP sanction resolves it. Nominee purchases do not.
7	Price realisation below ₹2,800/sq ft	Below roughly ₹2,800 the base case stops clearing an 18% hurdle at any realistic absorption.	Registered deeds for comparable gated plots, not portal asks.	Registered evidence above ₹3,000/sq ft would firm the base case considerably.
8	Entity–project link undocumented	A UP-registered LLP is marketing Maharashtra land. The instrument connecting them is unknown.	Ask for the registered development agreement or sale deed naming God City LLP.	A registered instrument in the LLP's name removes this.
9	Funding gap at peak draw	₹156 cr base case, ₹289 cr bear. Project-finance debt is not available pre-approval.	Funding plan, term sheets, partner net worth.	Committed equity or a sanctioned facility.
10	Thin resale liquidity at exit	A plot buyer's entire return depends on a resale market this report could barely evidence.	Count secondary-market registrations in comparable projects over three years.	An active, evidenced secondary market.
11	Private forest or hill-slope classification	Sterilises the affected area completely; common on Konkan ghat-edge land.	Check the 7/12 "other rights" column, private-forest notifications, and slope from survey contours.	A clean revenue classification across the holding.
12	Infrastructure slippage	Konkan Expressway is pre-clearance; Shaktipeeth is fighting land acquisition. NH-66 took fifteen years.	Track NHAI / MSRDC award and clearance notices.	An awarded, funded Shaktipeeth package reaching Patradevi would be a genuine re-rating event.
13	Architect engagement unverified	A trust signal used in marketing that carries no evidential weight until confirmed.	One email to the practice.	Written confirmation of the commission.
14	CRZ	Low. The site is 20–35 km inland; CRZ reaches only 50 m along tidal water bodies.	Check parcel boundaries against the district CZMP.	Only relevant if a boundary touches a tidal reach.

Red flags, stated plainly

None of what follows is evidence of wrongdoing. Each is a pattern that, in this market, correlates with buyers losing money — and each has an innocent explanation that the promoter can supply in an afternoon.

FLAG 1 — A PRICED PRODUCT WITH NO ADDRESS

A specific price per square yard, a specific phase size, and a channel-partner programme, for land whose village is not named anywhere. Legitimate developers publish their location; it is their principal asset. **Innocent explanation:** pre-launch confidentiality while aggregation completes.

FLAG 2 — SELLING AHEAD OF REGISTRATION

Pricing and agent recruitment with no MahaRERA number located. This is the specific conduct Section 3 exists to prevent. **Innocent explanation:** registration exists and is simply not indexed, or marketing is “soft” and no bookings have been taken — a distinction MahaRERA has repeatedly declined to accept.

FLAG 3 — SCALE AGAINST CAPACITY

A ₹1 lakh LLP, two years old, with no delivered project, marketing a scheme requiring roughly ₹155 crore of peak funding and a decade of sustained selling. **Innocent explanation:** the LLP is a marketing entity and the balance sheet sits elsewhere — which is exactly why the structure needs disclosing.

FLAG 4 — BORROWED CREDIBILITY

The strongest trust signal in the pitch — Hafeez Contractor — appears only on the promoter's own site. **Innocent explanation:** large practices do not list early-stage commissions.

FLAG 5 — GEOGRAPHY THAT DOES NOT SURVIVE A MAP

Beach imagery and a coastal connectivity map for a site 38–75 km from the coast; “New Goa” branding for land in Maharashtra; a “Sawantwadi” caption against a “30 minutes from Mopa” claim that Sawantwadi town cannot support. **Innocent explanation:** ordinary marketing latitude — but it is the kind that a buyer should price.

FLAG 6 — A BROCHURE THAT IS NOT PUBLISHED

The deck exists as a PDF on a laptop, shown over video calls. Nothing in it — the master layout, the area statement, the phasing — is publicly available, so no claim in it can be checked by anyone not already being sold to. **Innocent explanation:** pre-launch. But pre-launch is precisely when Section 3 bites.

AND ONE POINT IN THE PROMOTER'S FAVOUR

The entity is real, correctly registered, active, and its partners are named and traceable with a plausible real-estate background. A meaningful share of schemes at this stage cannot clear even that bar. The problem here is disclosure, not obvious fabrication.

Every material claim, and what stands behind it

Confidence in each material claim

Five blocks = corroborated by an official or primary record. Everything the valuation actually turns on sits at the bottom of this list.

God City LLP exists (LLPIN ACF-3634)		Official record
Incorporated 6 Feb 2024, RoC-Kanpur		Official record
Registered office in Noida, UP		Official record

Any completed project by these promoters	NOT FOUND	—	Delhiwood's own site describes The Farmlands and Delhiwood Studios as visions, not deliveries. Upgrade: an address and a completion certificate.
Mopa 5.40 M pax FY26; +15.2%; capacity phases 4.4 / 5.8 / 9.4 / 13.1 M	REPORTED	High	Multiple independent sources. Upgrade: AAI / concessionaire traffic data.
Chipi 73,022 pax FY26; 1,566 movements; 3 routes	REPORTED	High	Consistent across sources.
Sindhudurg population 8.50 lakh; -2.21% decadal growth; 163/km²	OFFICIAL	High	Census of India 2011.
ESA 7th draft re-issued 27 Jul 2026; 56,825.7 km²; Maharashtra 17,340 km²; townships ≥50 ha prohibited	OFFICIAL	High	Multiple independent reports of the notification. Upgrade: read the gazette text and its village schedule.
Bombay HC directions on the Sawantwadi–Dodamarg corridor; 25 villages	OFFICIAL	High	2013 and 2024 orders; Vanashakti and Awaaz Foundation petitions.
Yog City 153 ac; Phase 1 = 80 plots / 24,000 m²; MahaRERA P52900001889	REPORTED	Med-High	Project and portal sources. Upgrade: the MahaRERA registration page itself.
Comparable asking prices ₹22,300–40,000 per sq yd	ASKING	Medium	Property portals, with wide internal disagreement. Upgrade: registered sale deeds.
₹20 lakh for 250 m² near Mopa (≈₹743/sq ft)	TRANSACTION	Medium	The only transaction data point located. Single source, product type not fully specified.
All Part 8 financial outputs	CONSTRUCTED	n/a	This report's model. Assumptions listed in full; sensitivity-tested throughout.

HOW TO USE THIS REGISTER

Read down the confidence column. Everything with a high rating concerns the *context* — the airport, the census, the notification, the statute. Everything the *valuation* depends on — the land, the title, the approvals, the price — sits at low or nil. That inversion is the defining characteristic of this opportunity: the world around it is well documented and the asset itself is not.

Twelve documents, three weeks, about ₹2 lakh

The gap between “unratable” and “ratable” here is small, cheap and entirely in the promoter's gift. That is worth saying clearly, because it also means that a refusal to close the gap is itself the answer.

#	DOCUMENT OR CHECK	COST	TIME	WHAT IT SETTLES
1	The village name and Gat / survey numbers	Free — one question	1 min	Unlocks every other item on this list. Refusal to answer ends the enquiry.
2	MahaRERA search, project and promoter name	Free	2 min	Whether the project is being marketed lawfully.
3	Cross-check the village against the ESA corridor list and the 7th draft schedule	Free	30 min	Whether a 60.7 ha township is permissible at all.
4	7/12 extracts and mutation entries for every Gat number	₹2–5k	2–3 days	Ownership, area, tenancy, encumbrances, class of land, any private-forest entry.
5	Sale deeds or registered development agreement naming God City LLP	Free if produced	Same day	Whether the entity you would contract with controls the land.
6	Section 63 / 63-1A permission or Collector's order	Free if produced	Same day	Whether the acquisition itself is valid.
7	Zoning certificate under the Sindhudurg Regional Plan	₹5–10k	1 week	Whether residential development is permissible on this land.
8	NA order and sanctioned layout with the full area statement	Free if produced	Same day	The real saleable area — the number Part 6 estimates at 53%.
9	30-year title search opinion by a Sindhudurg advocate	₹50k–1.5 lakh	2–3 weeks	The single most valuable document in the pack.
10	Registered sale deeds for 5–10 comparable plots (Yog City, Axis Lake City, nearby NA layouts)	₹2–5k	3–5 days	Actual transacted prices and actual absorption. Settles the two variables that drive the whole model.
11	Written confirmation from Hafeez Contractor's practice	Free	1 week	Whether the central trust signal is real.
12	Access route: width, ownership and public status of the approach road	₹10–20k survey	1 week	Whether a layout with a single western entry can be sanctioned at all.
Total to move from unratable to ratable		≈₹1.5–3 lakh	≈3 weeks	Against a ₹87.5 lakh plot or a ₹156 crore development commitment.

THE ASYMMETRY TO KEEP IN MIND

Items 1, 2 and 3 cost nothing and take under an hour between them. They are also the three that are most likely to end the enquiry. **Do them before spending a rupee on anything else** — and specifically, do not commission the title search at item 9 until items 1 to 3 have passed, because a perfect title to land inside a prohibited zone is a perfect title to nothing.

What would have to be true

FOR THIS TO BECOME ATTRACTIVE

- A named village outside the ESA corridor and outside the 7th draft schedule.
- A live MahaRERA registration for Phase 1.
- A clean 30-year title over a contiguous holding with Section 63-1A permission or ITP sanction in place.
- A sanctioned layout showing net plottable area at or above 55%.
- Registered comparable deeds above ₹3,000 per sq ft and evidence of 100+ plot registrations a year across the corridor.
- A named, funded development partner with a delivered township.
- A negotiated entry at or below ₹60–70 lakh an acre for the land, or a plot price re-based to reflect an unapproved asset.

FOR THIS TO BE UNINVESTABLE

- The village appears on the 25-village corridor list, or inside the notified ESA.
- No MahaRERA registration, and continued marketing regardless.
- Land held through nominees or unregistered agreements to sell.
- Any material part of the holding classified as private forest or hill slope.
- Fragmented, non-contiguous parcels with gaps under other owners' control.
- No public access road of sanctionable width.
- Fewer than 50 registered plot transactions a year across the whole corridor.
- Refusal to answer items 1, 2 or 3.

THE TEST THAT MATTERS MOST IS THE CHEAPEST ONE

Notice how many items in the left-hand column are *documents a genuine project already has*. A sanctioned layout, a MahaRERA certificate, a title opinion, a Section 63-1A order — none of these is produced for a diligence request. They are produced because the project could not lawfully exist without them, and they sit in a folder. A developer who has them sends them the same afternoon.

So the real signal is not the content of the answer but its **latency**. A promoter who responds to “which village, and what is your MahaRERA number?” with a number and a village has one kind of project. A promoter who responds with a site visit invitation, a limited-time price, or a request to meet in person has another. **Both answers are informative. Only one of them costs you anything to obtain.**

Four ways to play this, and what each is worth

“Should I do this?” is the wrong question until you have said which *this*. The same land supports four completely different propositions with different capital, horizon and risk.

MODEL	CAPITAL	HORIZON	RETURN PROFILE	RISK	ASSESSMENT
A. Buy a plot ₹87.5 lakh for 250 sq yd	₹0.9 cr	7–10 yr	Needs a 3× exit for 15%	Very high	The worst risk-adjusted version. You take full execution, approval and liquidity risk, you have no control, and you are compensated only if the plot trebles. Reject on present evidence.
B. Broker the project Channel-partner mandate	Nil	Immediate	Commission	Very high	Marketing an apparently unregistered plotted project exposes the agent personally under RERA, and reputationally to every client placed into it. The fee is not worth it. Reject outright.
C. Buy corridor land Raw, outside this project	₹2–15 cr	5–10 yr	Land-only appreciation	Moderate	No approval risk, no absorption risk, no promoter risk, no counterparty beyond the seller. Entry at ₹30–60 lakh/acre against a residual development value of about ₹68 lakh/acre is a genuine margin of safety. The most defensible way to express a bullish view on this corridor.
D. Develop or co-develop 150 ac township	₹156 cr peak	10–12 yr	27% base IRR	High	Works on this report's base assumptions and fails on its bear ones, with the swing driven almost entirely by absorption. Requires capability neither promoter has demonstrated. Worth exploring only after Tests 1–3 pass, and only with control.

The decision, as a sequence of cheap tests

The thesis

What the opportunity actually is

Strip away the palaces and the European branding and this is a **land-banking play in the Mopa airport catchment, wrapped in a township narrative**. The underlying idea is sound and it is not original: Goa's new airport has pulled a genuine demand shadow across the Maharashtra border, land north of Patradevi is a fraction of North Goa's price, and NH-66 is finally nearly finished. Several developers have reached the same conclusion and are aggregating land in exactly this belt.

What is being *offered* is not that idea. It is a priced retail product — a plot at ₹35,000 per square yard — sold on behalf of a two-year-old ₹1 lakh LLP registered in Uttar Pradesh, for land whose location, ownership, zoning and regulatory status are all undisclosed, at a moment when a live central notification would prohibit a township of this size if the land falls in the wrong village.

What it is worth

On this report's base assumptions a 150-acre plotted township in this corridor generates **₹1,108 crore of gross development value, ₹359 crore of post-tax profit** and a **27% unlevered project IRR** over a decade, on a peak funding requirement of **₹156 crore**. Residual land value at an 18% target return is about **₹0.68 crore per acre**. Those numbers are constructed estimates and they are the *upper* bound of what is defensible, because they assume clean title, granted approvals and a favourable ESA outcome — none of which is established.

The bear case is not exotic — it is the corridor continuing to behave as it has: Yog City-pace absorption, a price that does not hold, hilly ground. On those inputs the project loses **₹280 crore** and cannot be financed. The distance between the two outcomes is almost entirely **absorption**, the one variable no brochure in this market discusses.

What is missing, and what that means

Twelve documents. About ₹2 lakh. Three weeks. Three of them are free and take under an hour. The promoter can close the entire gap by return of email. **The most informative thing about this opportunity right now is not what is in the brochure — it is what happens when you ask for the village name.**

RECOMMENDATION

Do not buy a plot. Do not take a brokerage mandate. Do not invest.

Not because the project is necessarily bad — on the evidence available it is impossible to say — but because **three independently disqualifying conditions are true at once**: the land has no disclosed identity, no MahaRERA registration could be located while plots are actively being priced and agents recruited, and a live draft notification would prohibit a township of this size in the very belt where the location analysis places it. Any one of those would justify stopping. Together they mean there is nothing here to price — only an unpriced option on someone else's disclosure.

AND WHAT TO DO INSTEAD

Run the three free tests. Name the village, search MahaRERA, check the ESA schedule. An hour of work that either reopens this entirely or closes it permanently.

If they pass, negotiate — do not accept. Bid at raw-land value with approvals, registration and a clean title opinion as conditions precedent, and pay a development premium only against sanctioned documents. The residual land value in Part 8 is the ceiling, not the opening.

If the thesis is what attracts you, buy the thesis, not the project. The corridor case — Mopa compounding, Shaktipeeth terminating at Patradevi twelve kilometres away, NH-66 complete — is real and evidenced. Raw land at ₹30–60 lakh an acre in a named, title-checked, non-ESA village expresses that view with none of the promoter, approval or absorption risk, and at a discount to what a developer could rationally pay. **The corridor is a better idea than the project.**

Where this came from

PRIMARY MATERIAL

A 22 min 45 s screen recording of a God City sales presentation delivered over Google Meet, supplied by the commissioning party. Analysed by extracting frames at 2 fps, detecting static segments, and averaging 2–898 consecutive frames per segment to suppress H.264 compression noise before upscaling. Source resolution 396×850 — sufficient for headline typography and layout morphology, insufficient for any numeric content on any slide. Seven stills reproduced in Part 2.

CORPORATE AND STATUTORY RECORDS

MCA / LLP registry data for God City LLP (LLPIN ACF-3634) via corporate-records aggregators · Census of India 2011, Sindhudurg district · Bombay High Court directions in the Sawantwadi–Dodamarg corridor matter, including the 2013 order on the Awaaz Foundation petition and the 2024 direction, and the Vanashakti petition of 2014 · Ministry of Environment, Forest and Climate Change, seventh draft Western Ghats Ecologically Sensitive Area notification re-issued 27 July 2026 · Maharashtra Tenancy and Agricultural Lands Act 1948, sections 43, 63 and 63-1A, as amended by Maharashtra Act 1 of 2016 · Unified Development Control and Promotion Regulations for Maharashtra (UDCPR) 2020, layout and Integrated Township Project provisions · Real Estate (Regulation and Development) Act 2016, section 3 and the associated penalty provisions · Coastal Regulation Zone notification 2019.

PROMOTER MATERIAL

godcity.in — corporate site, about page, blog and channel-partner page · godcityprojects.in — marketing microsite · delhiwood.in — adjacent venture described by the same promoters. All treated as claims, never as facts.

MARKET AND INFRASTRUCTURE SOURCES

Reported traffic and capacity data for Manohar International Airport, Mopa, and Sindhudurg (Chipi) Airport · NHAI and Maharashtra PWD reporting on NH-66 four-laning progress · MSRDC material on the Konkan Expressway and the Revas–Redi Coastal Highway · Maharashtra government notifications on the Shaktipeeth Expressway including the revised alignment approved 1 April 2026 · property portals and project sites for Yog City / Yog Anand (Maneri, Dodamarg) and Axis Lake City (Dodamarg), including their MahaRERA registration numbers · second-home market commentary from developer-affiliated sources, used only where labelled as such.

Standing instruction for whoever acts on this. If a MahaRERA registration number is produced, re-run Part 5 and Part 9 immediately — a valid registration would materially improve the promoter assessment and would mean the sanctioned layout, the area statement and the approval record all become public through the portal, closing roughly half of Part 11's list at a stroke. If the village name is produced and sits outside both the corridor list and the notified ESA, the fatal risk in this report drops to moderate and the opportunity becomes genuinely ratable. Neither event is unlikely. Both are cheap to test. Neither has happened yet.

METHOD AND LIMITATIONS

Research channel. Conducted through a network policy permitting search-engine queries but blocking direct access to individual sites, including godcity.in, godcityprojects.in, the MahaRERA portal, the Maharashtra ready-reckoner database and corporate-records sites. Findings therefore rest on what search indexes surfaced from those pages rather than on the pages themselves. Where this matters it is flagged in the text — most importantly in respect of the MahaRERA search and the ready-reckoner rates.

Geography. The maps are schematic, built from approximate coordinates. They are adequate for relative position and drive-time reasoning and are not survey-grade. The God City location envelope is this report's inference, clearly marked as such, and is not a disclosure.

Modelling. Every financial output in Part 8 is a constructed estimate from a model built for this report. Assumptions are listed in full, one-at-a-time sensitivities are shown for all six material inputs, and a two-variable grid is provided for the two that dominate. Financing is deliberately modelled without compounding, and cases where the deficit never turns are flagged as unfinanceable rather than being assigned a spurious interest figure.

Status. Research and analysis. Not investment advice, legal advice, a valuation certificate or a title opinion. No representative of God City LLP was contacted in preparing it, and the promoter has therefore had no opportunity to answer the questions it raises — which is exactly what Part 11 is for.
