

God City Sindhudurg

A ~150-acre luxury township on the Konkan coast — the promoter, the place, the paperwork, and the six months of work that should come before anybody pays anything.

Subject God City LLP (LLPIN ACF-3634) and its proposed integrated township in the Sindhudurg growth corridor, Maharashtra

Covering Promoter and corporate structure · past-project lineage · district and market analysis · regulatory pathway · risk register · diligence work plan

Prepared February 2026, from public-domain sources only

Contains 19 figures — maps, charts, heatmaps, Gantt schedules, flowcharts and decision tools

~150
acres claimed for the township

6 Feb 2024
date the developing LLP was incorporated

₹1,00,000
total partner contribution in that LLP

None
MahaRERA registration found in the public domain

This report is research, not advice. It is built entirely from publicly available records and states the source and confidence of every material claim. Absence of a document from the public domain is not evidence that the document does not exist. Readers in or near a transaction should retain a Maharashtra-qualified advocate and an independent registered valuer before acting. See **Appendix D — Method, scope and limitations**.

CONTENTS

What is in this report, and where to find it

OPENING

01	Executive summary — the seven findings that matter	The whole argument in two pages
02	How this report was built, and how to read it	Method, evidence grading, and what “not found” means

PART I — THE PROPOSITION AND THE PEOPLE BEHIND IT

03	What is actually being offered	The claim, stripped of adjectives
04	The entity: God City LLP	Figure 8 — corporate structure and the gap in the middle
05	The promoters, and the track record they cite	Winsten Park, VHR Group, and what the credential actually is
06	The master planner	The strongest single fact in the project's favour
07	The evidence ledger	Figure 7 — sixteen disclosure items, ten of them absent

PART II — THE PLACE

08	Sindhudurg: the district in numbers	Figures 18 and 1 — fundamentals, seasonality, orientation
09	Access — what has genuinely changed	Figures 2 and 3 — road, rail, sea and air
10	The catalyst pipeline, graded by evidence	Figure 4 — delivered, contracted, announced, missed
11	Tourism, industry and the demand engine	Taj, the submarine museum, the pharma hub, the film city

PART III — THE MARKET

12	The land-value ladder	Figure 5 — the same acre, priced five different ways
13	The entry ticket, and the competitive set	Figure 6 — six rungs, one comparable unit
14	Where this sits in India's second-home market	Goa, Alibaug, Lonavala — and what Sindhudurg is really competing with

PART IV — LAW, LAND AND REGULATION

15	MahaRERA — the gate everything else hangs off	Section 3 thresholds, phases, escrow, section 18
16	The Integrated Township Policy at 150 acres	40 ha, contiguity, 15% social housing, 50% stamp duty relief
17	Who may buy land here, and what makes it buildable	Section 63, N.A. conversion, and the Konkan's tenure traps
18	CRZ, the Western Ghats ESA, and the wildlife corridor	The 200 m line, and the 25 villages
19	The approval pathway, end to end	Figure 12 — ten gates, in order, with the authority named

PART V — THE ECONOMICS

20	What “150 acres” actually contains	Figure 15 — the land budget behind the headline
21	What it costs to build, and what the entity is capitalised at	Figure 16 — ₹389 crore against ₹1 lakh
22	The buyer's arithmetic	Figure 17 — all-in entry cost and the real break-even

PART VI — RISK

23	The risk register	Figure 10 — eighteen exposures, ranked
24	Capability profile and SWOT	Figures 9 and 11 — where the asymmetry lies

PART VII — THE WORK

25	The decision tree	Figure 13 — nine gates and what “no” should look like
26	The work plan	Figure 14 — 26 tasks, six workstreams, four gates, six months

27	The information request — every document to ask for, in one list	Copy, send, and keep the reply
----	--	--------------------------------

PART VIII — CONCLUSION

28	The verdict, by who you are	Figure 19 — six readers, six right answers
29	What would change this view	The specific triggers, named

APPENDICES

B	Glossary of Maharashtra land and planning terms	7/12, Itar Hakk, kul, Inam, Class-II, guntha, NDZ, ESA
C	Sources consulted	Grouped by category
D	Method, scope and limitations	Including what this report could not check

01 · EXECUTIVE SUMMARY

Seven findings, and what follows from them

There are two entirely separate questions inside “should I buy into God City?”, and almost every sales conversation about this project fuses them. The first is whether Sindhurg is a good place to own land in 2026. The second is whether this particular vehicle, promoted by this particular entity, is a safe way to do it. This report answers them separately, because the honest answers point in different directions.

FINDING 1 — THE LOCATION THESIS IS REAL, AND BETTER-EVIDENCED THAN MOST

Sindhurg is not a speculative fiction. A functioning airport sits inside the district at Chipi; Goa's Manohar International Airport at Mopa is roughly 14 km from Sawantwadi; the district's stretch of the four-laned NH-66 is effectively complete; a Vande Bharat service runs on the Konkan Railway; and a Mumbai-Vijaydurg Ro-Ro ferry began operating on 1 March 2026. Layered on top is an unusually credible public-sector tourism pipeline — an IHCL/Taj hotel agreement at Shiroda-Velagar, India's first submarine-and-reef tourism project with the ex-INS Guldar scuttled off Nivati Rocks in May 2026, a Swadesh Darshan 2.0 destination designation, and a proposed MIDC pharma hub at Adali. None of that is marketing.

FINDING 2 — BUT MOST OF THAT VALUE IS ALREADY IN THE PRICE

Mopa, Chipi, NH-66 and the ferry are delivered. They are not upside waiting to be captured; they are the reason land in the Kudal-Sawantwadi belt already trades where it does. What remains genuinely unpriced sits in the announcement tier — the 200-acre Film City at Nandos, the Chipi “Aerocity”, the ₹70,000 crore greenfield Konkan Expressway, the runway extension — and not one of those has a traceable sanctioned DPR, award or funded programme. The calibration point is the Navi Mumbai-Chipi air link: announced with a firm date of 15 August 2026, which passed with no service. **Figure 4** separates the tiers.

FINDING 3 — THE DEVELOPING ENTITY IS TWO YEARS OLD AND CAPITALISED AT ₹1,00,000

God City LLP was incorporated on 6 February 2024 with the Registrar of Companies, Kanpur, under LLPIN ACF-3634. Its registered office is in Noida, Uttar Pradesh. Its total partner contribution is ₹1,00,000 — the practical legal minimum. **Figure 16** sets that against an order-of-magnitude build-up for a 150-acre township of roughly ₹389 crore. The ratio is about 1 : 389,000. This is not, on its own, an allegation: developers routinely build through project SPVs, landowner joint ventures, development-management agreements and debt. But it means some other balance sheet must be carrying this, and the buyer has not been told whose.

FINDING 4 — THE TRACK RECORD CITED BELONGS TO A DIFFERENT COMPANY'S PROJECT

The credential published for one designated partner is “directorial experience with the WinstenPark Real Estate Project of VHR Group”. Winsten Park is a 3.71-acre, three-tower, roughly 674-unit scheme of studios, shops and IT space at Knowledge Park V, Greater Noida. Its promoter of record on UP RERA is SKV Infotech Private Limited; the brand is VHR Group, a Verma-family business established in 1986. Phase I (UPRERAPRJ5008) was launched in December 2015 with completion due 14 December 2020; Phase II (UPRERAPRJ9566) was due 7 July 2021; possession on parts of the scheme is reported into November–December 2025, and Phase III (UPRERAPRJ11430) carries a completion date of 16 January 2028. Whatever one concludes about that record, three things are certain: it is a different asset class, in a different state, under a different promoter entity — and it is not a delivery record of God City LLP, which has delivered nothing. **Figure 8** draws the distinction.

FINDING 5 — THERE IS NO MAHARERA REGISTRATION IN THE PUBLIC DOMAIN

This is the finding that governs all the others. Under section 3 of the Real Estate (Regulation and Development) Act as administered by MahaRERA, registration is compulsory for any project where the land exceeds 500 square metres or the plots or apartments exceed eight, counting all phases — and each phase requires its

own registration. Until registration is granted, a project may not lawfully be advertised, marketed, booked or sold. Searches of MahaRERA's project register, its lapsed-project list and its suspended/abeyance list, together with general web search, returned no registration for this project in February 2026. Meanwhile a channel-partner recruitment programme is live on the promoter's website.

FINDING 6 — ALMOST NOTHING CHECKABLE HAS BEEN PUBLISHED

Figure 7 tests sixteen disclosure items against the public record. The ten most decision-critical — registration number, contracting entity, village and survey numbers, sanctioned layout, title chain, CRZ position, ESA status, township locational clearance, price list, possession date — are all absent. What is published is a scale (~150 acres), an architect's name, two biographies and a broker programme. A conveyancing lawyer, a valuer or a lender can act on none of those. Without survey numbers, no title search, no CRZ check against the Sindhudurg Coastal Zone Management Plan and no valuation can even begin.

FINDING 7 — THE STRONGEST FACT IN THE PROJECT'S FAVOUR IS THE MASTER PLANNER

The engagement of Architect Hafeez Contractor — Padma Bhushan 2016, the practice behind Hiranandani Gardens, The Imperial and The 42 — is a serious, top-tier appointment, and it is

the kind of claim that can be confirmed with a single phone call to the practice. It is also the only element of the proposition that suggests real township-scale intent rather than a land-marketing exercise. It deserves to be verified rather than dismissed.

WHAT FOLLOWS FROM ALL SEVEN

Nothing in this report says God City will fail, and nothing in it alleges wrongdoing. It says something narrower and more useful: **as at February 2026 there is not yet enough in the public domain to make a decision on, and the single document that would change that costs nothing to obtain.** Ask for the MahaRERA registration number. If it exists, the entire diligence programme in **Figure 14** becomes worth commissioning. If it does not, no amount of further analysis — and no amount of money — should be committed until it does.

The rest of this report is the working behind those seven findings: the district and its numbers (Part II), the market and what land actually costs at each rung of the ladder (Part III), the law that governs every step (Part IV), the economics for both developer and buyer (Part V), a ranked risk register (Part VI), and a structured six-month work plan with the exact documents to request (Part VII). Part VIII gives the verdict — six of them, because a holiday-home buyer, an NRI, a broker and a co-investor are not asking the same question.

How this report was built, and how to read it

This is a public-record report. Every factual claim in it comes from a published source — a corporate register, a regulator's portal, a government or statutory instrument, a news report, a listing portal, or the promoter's own website — and the source is named either in the text, in the figure's source line, or in **Appendix A**. No confidential information was used, nobody was interviewed, and

no site visit was made. That is a real limitation and it is stated here rather than buried.

The evidence grades used throughout

Claims are not all worth the same. Four grades are used consistently, in the text and in the figures:

GRADE	MEANING	EXAMPLE IN THIS REPORT
REGISTER	On a public register, independently checkable today	LLPIN ACF-3634; incorporation date 6 February 2024; UP RERA numbers for Winsten Park
REPORTED	Published by a government body, regulator or established news outlet	Chipi passenger traffic of 73,022 in FY 2025-26; the Ro-Ro launch on 1 March 2026; the ₹110.58 crore submarine sanction
ASSERTED	Claimed by a promoter or other interested party, unverified	The ~150-acre scale; the Hafeez Contractor engagement; “prices up 25-30%”; “+28% within 25-30 km of Mopa”
CONSTRUCTED	This report's own estimate, model or judgement, with assumptions stated	The ₹389 crore capital build-up; the land budget in Figure 15; the risk scores in Figure 10

ONE DISTINCTION THAT MATTERS MORE THAN ANY OTHER

Several striking market statistics circulating about Sindhudurg — land up 28% within 25-30 km of Mopa in eighteen months, prices up 25-30% district-wide, highway-frontage premiums of 20-30% — originate in the marketing material of firms selling plots in exactly that market. They may well be right. They are reproduced in this report where relevant because they are part of the information environment a buyer is operating in, but they are labelled **ASSERTED** every time, and no conclusion here rests on them. The same discipline is applied to the promoter's own claims.

What “not found in the public domain” means

It means exactly what it says: a search was run and nothing was returned. It is **not** a finding that a document does not exist. A promoter may hold a complete set of title deeds, a sanctioned layout and a pending registration application and simply not publish any of it — which is common, and not in itself improper. The correct response to an absence is therefore not suspicion; it is

a written request. Section 27 of this report sets out the request in full.

Two things this report deliberately does not do

It does not value any specific parcel of land, because no parcel has been identified. And it does not tell you what to do with your money — it tells you what is known, what is not, what the law requires, and what sequence of work would close the gap. **Figure 19** gives six conditional verdicts, each naming the specific document that would change it.

A note on spelling and units

“Sindhudurg” is used throughout, including where sources use “Sindhudurga” or “Sindhudurnagari” (the district headquarters at Oros). Land areas follow local convention: **1 guntha = 1,089 sq ft ≈ 101.2 m²**; **1 acre = 40 guntha = 43,560 sq ft**; **1 hectare ≈ 2.471 acres**. Where a source quotes a rate per guntha or per square yard, the conversion to ₹ per square foot is this report's and is shown alongside the original figure so it can be checked. Currency is Indian rupees; “lakh” is 100,000 and “crore” is 10,000,000.

The proposition, and the people behind it

Before the district, the market or the law: what exactly is being offered, by whom, on what evidence — and which parts of the story belong to somebody else.

03

What is actually being offered

Stripped of adjectives, the proposition on God City LLP's website is this. The company describes itself as a real estate development business building premium projects across India, and its flagship is **God City** — an integrated luxury township in what it calls the “Sindhudurg growth corridor”, envisaged to extend across approximately 150 acres, offering **luxury plots, villas and studios**, and master planned by **Architect Hafeez Contractor**. The positioning is resort-inspired coastal living combined with the structure of a master-planned community, aimed at three buyer types at once: lifestyle end-users, holiday-home buyers, and investors. A channel-partner programme invites agents to “represent premium real estate developments” and to access project briefs, pricing, availability and approved sales assets.

The company's own blog makes the market argument explicitly and, it should be said, rather well: that Sindhudurg has long been known for clean beaches, historic forts and a relaxed coastal life, that it is now gaining attention because of improving connectivity, tourism development and proximity to Goa, and that for buyers who want “the charm of Goa without the overcrowding and high entry cost of saturated beach markets”, it is a compelling

alternative. That is a coherent thesis and Part II of this report largely supports it.

What is not on the website is equally specific, and is set out in full in **Figure 7**: no village or survey numbers, no site plan, no MahaRERA registration number, no price list, no payment schedule, no possession date, and no identification of the entity that would actually sign an agreement for sale. Every project page carries the words *Coming Soon*.

A FAIR READING

A project genuinely at pre-launch stage would look exactly like this. Land aggregation is sensitive and developers routinely keep survey numbers confidential until options are exercised; registration follows layout sanction, which follows N.A. conversion, which follows assembly. The concern raised in this report is not that the project is early. It is that **marketing and channel recruitment are running ahead of registration**, which is the one part of that sequence the law does not treat as optional.

04

The entity: God City LLP

One thing about this proposition is fully verifiable today, and it is worth doing before anything else. Ministry of Corporate Affairs

records show:

FIELD	RECORD
Name	GOD CITY LLP
LLPIN	ACF-3634
Incorporated	6 February 2024
Registrar	RoC-Kanpur (Uttar Pradesh)
Registered office	A-118, 4th Floor, Noida, Gautam Buddha Nagar, Uttar Pradesh 201301
Total contribution	₹1,00,000
Designated partners	Rakesh Kumar; Suresh Kumar — presented publicly as Rakesh Chaudhary and Suresh Chaudhary
Status	Active

Four observations follow, and none of them requires any inference beyond the record itself.

It is two years old. An entity incorporated in February 2024 has, by definition, no delivery history. That is not disqualifying — every developer starts somewhere — but it does mean the question “what have they built before?” has no answer at the entity level,

and the answer offered instead belongs to somebody else (section 05).

It is capitalised at ₹1,00,000. Total partner contribution is the legal minimum in substance. A 150-acre township requires capital of a different order entirely; **Figure 16** builds that figure up and puts the two side by side.

It is an Uttar Pradesh entity. Registered with RoC-Kanpur, with its office in Noida. The project is in Maharashtra, in a district whose land law — kul tenancy, Inam and Devasthan grants, Occupant Class-II tenure, the Maharashtra Private Forests (Acquisition) Act, CRZ practice under the Sindhudurg CZMP — is a local specialism that defeats experienced outsiders routinely. That is a capability question, not a character one, and it is scored as such in **Figure 9**.

And it may not be the entity a buyer contracts with. This is the most important of the four. Land in Maharashtra has to be held by somebody, and a MahaRERA registration names a specific legal promoter. Neither the land-holding vehicle nor the intended registered promoter is disclosed. A buyer's recourse — for delay interest, for defect, for non-delivery of amenities — runs against whatever entity signs the agreement for sale, and against its balance sheet. Not against a brand, and not necessarily against this LLP. **Figure 8** draws that missing box explicitly, because it is the thing most likely to be glossed over in a sales meeting.

Figure 8 • Who is actually behind this — the corporate structure, and the gap in the middle of it

Figure 8. Solid lines are facts on a public register. Dashed lines are the promoter's own claims. Dotted lines are associations belonging to an individual rather than to the contracting entity. The red box at top right is not a finding of wrongdoing — it is a question a buyer is entitled to have answered in writing before any money moves.

05 The promoters, and the track record they cite

The published biographies are brief. **Rakesh Chaudhary** is described as a businessman guided by “simple living and high thinking”, born into a Defence family, who chose real estate to create healthier, greener living environments, with over eighteen years in the sector including — and this is the operative phrase — “directorial experience with the WinstenPark Real Estate Project of VHR Group”. **Suresh Chaudhary** is described as a Delhi University graduate from an Army family with fourteen years in real estate, also credited with creating Delhiwood Pvt. Ltd. and producing the Punjabi film *Hard Kaur*.

The second biography contains no real-estate delivery credential at all; a film production company is not evidence of township execution capability, in either direction. The first biography does

contain one, and it is worth following properly, because it is the only delivery claim the project makes.

What Winsten Park actually is

Winsten Park sits at Plot No. 17, Chauganpur, Knowledge Park V, Greater Noida, Uttar Pradesh, near the Greater Noida West link road. Listing-portal and RERA data describe a scheme of about **3.71 acres** comprising **three towers** and roughly **674 units**, with unit sizes ranging from 97 sq ft upward — a mixed development of studio apartments, shops, office space and IT/ITES area rather than a residential township. Studios are marketed in the 590-890 sq ft band, with prices quoted from around ₹49 lakh on some configurations and from ₹1.5 crore on others. The brand is **VHR**

Group, a business established in 1986 and led by the Verma family (R. D. Verma with Sanjeev and Nilaksh Verma), with a reported portfolio of thirty-plus completed projects across residential, commercial, industrial and hospitality — including

Palm Resort in Ghaziabad and Windsor Court in Dehradun. The **promoter of record on UP RERA is SKV Infotech Private Limited.**

PHASE	UP RERA REGISTRATION	LAUNCHED	COMPLETION DUE	NOTE
Winsten Park Phase I	UPRERAPRJ5008	15 December 2015	14 December 2020	Promoter of record: SKV Infotech Pvt Ltd
Winsten Park Phase II	UPRERAPRJ9566	—	7 July 2021	Luxury studio component
Winsten Park Phase III	UPRERAPRJ11430	—	16 January 2028	Listed as “Vascoda Winsten Park Phase 3”; units 97–1,550 sq ft
Possession reported	Possession on parts of the scheme is reported into November–December 2025 — that is, four to five years beyond the Phase I and Phase II completion dates on the register.			

Two conclusions, and it is worth being precise about both.

On the record itself. The gap between a December 2020 completion date and possession reported into late 2025 is substantial. It is also, in fairness, unexceptional for Delhi-NCR projects launched in that vintage, and this report has found no UP RERA order, penalty or class of buyer complaint specific to the scheme. The honest characterisation is: *a long-delayed but apparently progressing project, of a type and era where long delay was the norm*. Anyone relying on this credential should ask for the completion certificates and the RERA complaint history directly — it is workstream A in **Figure 14**.

On whose record it is. This matters more. Winsten Park is 3.71 acres of vertical mixed-use in Greater Noida, promoted by SKV Infotech Private Limited under the VHR Group brand. God City is proposed as ~150 acres of horizontal plotted township on the

Konkan coast, promoted by an LLP incorporated in 2024. The claimed link between them is one individual's directorial experience. That is a personal association, not a corporate one — it transfers no balance sheet, no delivery systems, no local approvals capability and no legal recourse. It is roughly forty times the land area, in a different state, a different product type and a different regulatory regime. **Figure 8** renders that as a dotted line for exactly this reason.

THE QUESTION TO ASK, IN ONE SENTENCE

“Which legal entity will sign my agreement for sale, what has *that entity* completed, and may I see the completion certificates?” Every other question about track record is a variation on this one.

06The master planner

The project states that it is master planned by **Architect Hafeez Contractor**. This is a genuinely significant claim and it deserves to be reported accurately rather than waved past. Hafeez Contractor founded his practice in 1982 and has led it to a team of over six hundred professionals. He was awarded the **Padma Bhushan in 2016**, holds two honorary doctorates, and has received more than seventy-five national and international awards. His portfolio includes Hiranandani Gardens in Powai — the reference township for master-planned living in India — along with The Imperial towers in Mumbai, The 42 in Kolkata, the D. Y. Patil Stadium in Navi Mumbai, and DLF Cyber City in Gurgaon. The *New York Times* called him “the man who draws India”.

If the engagement is real and current, it is the single strongest signal in the entire proposition — because a practice of that

standing does not typically attach itself to a land flip, and because township master planning is precisely the discipline the project needs. It is also the most easily verified claim on the website: one enquiry to the practice confirms or refutes it, and that enquiry is task four in **Figure 14**.

Until it is confirmed, however, it should be held at **ASSERTED**. No scope of appointment, no concept drawing, no land-use plan and no confirmation from the practice appears in the public domain. Naming a celebrated architect is, unfortunately, one of the cheapest available forms of credibility in Indian real estate marketing, and the gap between “has been engaged to master plan” and “was consulted once” is invisible from outside.

07The evidence ledger

The preceding three sections can be compressed into a single test: of the documents a buyer, a lawyer, a valuer or a lender would actually need, how many exist in the public domain? **Figure 7**

runs that test across sixteen items, ordered from most to least decision-critical.

Figure 7 • The evidence ledger — what a buyer needs, against what God City actually publishes

Sixteen disclosure items, ordered from most to least decision-critical. Ten of the first ten are absent. The four items that are present are marketing assets — a scale, a famous architect, two biographies and a broker programme — none of which a conveyancing lawyer, a valuer or a lender can act on.

DISCLOSURE ITEM • and why a buyer needs it	STATUS, FEB 2026
MahaRERA project registration number Without it the project cannot lawfully be advertised, marketed, booked or sold at all (MahaRERA s.3: any project over 500 sq m or 8 plots).	Not found in the public domain
Entity that will sign the agreement for sale God City LLP is the brand on the website. The promoter on a MahaRERA registration is a specific legal person — and it may not be this LLP.	Not found in the public domain
Village, gat / survey numbers, site boundary Nothing can be title-searched, CRZ-checked, ESA-checked or valued without them. This is the irreducible minimum for any diligence.	Not found in the public domain
Sanctioned layout plan and N.A. order Determines whether plots legally exist, how many, of what size, and what may be built on them.	Not found in the public domain
Title chain, 7/12 extracts, search report The Konkan's specific traps — kul tenancy, Devasthan/Inam, Class-II tenure, private-forest classification — all live in these documents.	Not found in the public domain
CRZ position and CZMP map reference The Sindhudurg coast is largely CRZ-III B with a 200 m No-Development Zone. Applicability is decided survey number by survey number.	Not found in the public domain
Western Ghats ESA / wildlife-corridor status The Bombay High Court has directed ESA notification of 25 Sawantwadi-Dodamarg villages. Whether the site is one of them is material.	Not found in the public domain
Integrated Township Project locational clearance At ~150 acres the project is above the 40 ha ITP threshold. ITP brings real benefits and real obligations, including 15% social housing.	Not found in the public domain
Price list, payment schedule, area statement No rate card exists in the public domain, so no buyer can compare the offer to the market or to the ready-reckoner rate.	Not found in the public domain
Committed possession / completion date The date from which delay interest under RERA s.18 would run. Absent registration there is no such date and no such remedy.	Not found in the public domain
70% escrow / designated account A statutory consequence of registration. Until the project is registered, money paid is not protected by the escrow mechanism at all.	Not applicable until registered
Master planner engagement Architect Hafeez Contractor is named as master planner. The claim is specific and checkable in principle, but no scope, drawing or confirmation is published.	Asserted by promoter, unverified
Project scale (~150 acres) and product mix Stated as luxury plots, villas and studios across ~150 acres. Asserted by the promoter; no land schedule or aggregation status supports it.	Asserted by promoter, unverified
Promoter background and biographies Published on the company website. Self-reported, and — as Figure 8 shows — the credential cited belongs to a different group's project.	Published (self-reported)
Corporate registration (LLPIN, partners) The one item independently verifiable today: LLPIN ACF-3634, incorporated 6 Feb 2024, RoC-Kanpur, total contribution ₹1,00,000, two designated partners.	Independently verifiable
Channel-partner / broker recruitment Active. Note the ordering: a sales channel is being built before a registration number exists to sell against.	Published (self-reported)

Method: every public God City LLP web page (home, about, blog, channel-partner) was searched, together with MahaRERA's project search, lapsed-project and suspended-project registers, and general web search, in February 2026. "Not found in the public domain" means exactly that — it is not a finding that the document does not exist. A promoter may hold all of these and simply not publish them, and a serious enquiry should request every one of them in writing before any payment is made.

Figure 7. The ten most decision-critical items are all absent; the four that are present are marketing assets. Note the shape of the ledger rather than any single row — disclosure is strong exactly where it costs the promoter nothing and weak exactly where it would create obligations.

Read one way, this is simply what a pre-launch project looks like. Read another, the ordering is informative: the items that are published (scale, architect, biographies, broker programme) are the ones that generate demand, and the items that are absent (registration, entity, survey numbers, layout, title, price, possession date) are the ones that would create enforceable

obligations. That asymmetry is not proof of anything. It is, however, exactly the asymmetry that the Real Estate (Regulation and Development) Act exists to correct — which is why Part IV of this report treats registration not as paperwork but as the hinge on which everything else turns.

The place

Sindhudurg on its own terms — the demography that decides who a township here can sell to, the access that has genuinely changed, and a catalyst pipeline sorted by how firm each commitment actually is.

08

Sindhudurg: the district in numbers

Sindhudurg is Maharashtra's southernmost district, part of the Konkan division, bordering Goa. It covers **5,207 km²** across **eight talukas** — Devgad, Kankavli, Vaibhavwadi, Malvan, Kudal, Vengurla, Sawantwadi and Dodamarg — containing 748 villages and 8 towns, administered from three subdivisions (Kankavli,

Kudal, Sawantwadi) with the district headquarters at **Oros**, the planned town also called Sindhudurnagari. It was India's first district to be formally designated a tourism district, and it is a Swadesh Darshan 2.0 destination.

Figure 18 • District fundamentals — and the two seasonal facts most decks leave out

Sindhudurg's demographics explain who a township here can realistically sell to; its rainfall explains why building it takes longer than a spreadsheet assumes.

standing explanation for Konkan schedule slippage. Second, the district then runs short of water in April and May — so a buyer who inspects during the pleasant dry months sees neither how the site drains under monsoon load nor how it performs under water stress. **Insist on at least one monsoon-season site visit before committing.** There is no substitute for watching where the water goes.

The district also sits inside a genuine hazard envelope: Western Ghats landslide susceptibility, coastal flood exposure, and an

Arabian Sea cyclone frequency that has risen in recent years — Cyclone Tauktae in May 2021 was the fifth-strongest Arabian Sea storm since 1998. Maharashtra's own Konkan Disaster Mitigation Project covers Sindhudurg among five coastal districts, funding saline embankments, anti-sea-erosion bunds and landslide protection. This is a manageable risk, correctly priced; it is not a reason to avoid the district. It is a reason to read a geotechnical report before buying a slope.

08 (CONTINUED)

Orientation: where the corridor actually is

Figure 1 · Sindhudurg district — orientation and the growth-corridor assets that frame God City

Schematic map. Positions are approximate and indicative only — this is an orientation aid, not a survey or cadastral document. God City is marketed as sitting in the “Sindhudurg growth corridor”; the promoter has not published a village, gat/survey number or site plan, so the site itself cannot be plotted. The Kudal–Sawantwadi–Mopa axis shown is where the corridor narrative points.

Figure 1. A schematic orientation map, not a survey document. The God City site cannot be plotted because no village or survey number has been published — the question mark in the Arabian Sea is the honest representation of that.

The geography that matters for this proposition is a narrow inland belt running from Kankavli south through Kudal and Oros to Sawantwadi and Dodamarg, roughly parallel to the coast and threaded by both NH-66 and the Konkan Railway. That belt is where the airports, the stations, the highway and the Goa border converge; it is also where the land is buildable without colliding immediately with the Coastal Regulation Zone. Almost every project marketed as “Sindhudurg, near Goa” sits along it.

Two boundaries frame it. To the west, the coast — Devgad, Achara, Malvan and Tarkarli, Vengurla, Shiroda — carries the scenery, the tourism and the price premium, and also the **200 m No-Development Zone** under CRZ-III B. To the east, the Western Ghats rise into ecologically sensitive terrain where the Bombay High Court has directed notification of a 25-village Sawantwadi–Dodamarg wildlife corridor. The developable middle is genuinely attractive and genuinely constrained on both sides, which is precisely why the exact survey numbers of any 150-acre assembly are not a detail — they are the whole question.

09

Access — what has genuinely changed

Sindhudurg's investment case is, almost entirely, a time-compression case: the argument that a place which used to be twelve hours from Mumbai is now six, and that value follows.

Three of the four access channels have genuinely improved. One has not, and it happens to be the one that would matter most to a weekend-home buyer.

Figure 2 • The access story — how far it has actually moved, mode by mode

Sindhudurg's investment case rests almost entirely on time-compression from Mumbai and Pune. Three of the four channels have genuinely improved. The fourth — the direct Mumbai air link that would matter most to a weekend-home buyer — has not started.

Sources: NHAI / MSRDC progress reporting on NH-66 Panvel-Sindhudurg; Maharashtra Maritime Board and operator announcements for the Mumbai-Vijaydurg Ro-Ro (launched 1 March 2026); Fly91 published schedules and Sindhudurg Airport (SDW) traffic data; Airports Authority of India / Manohar International Airport (GOX) for the Goa gateway. Journey times are typical door-to-door estimates, not timetable times.

Figure 2. Door-to-door journey times from Mumbai, before and after. The dashed red row is the Navi Mumbai-Chipi air link: advertised with a start date of 15 August 2026, which passed with no service.

ROAD — THE FOUR-LANING OF NH-66

The 466 km Panvel-Sindhudurg corridor is the backbone of the thesis, and within Sindhudurg it is substantially finished: packages P-9 and P-10 are reported at around 99% complete and the district section is effectively done. The full corridor is targeted for completion around the end of 2026 or early 2027, which would cut Mumbai-Goa from twelve or thirteen hours to about six. The caveat is the history: this project has been delayed repeatedly for a decade by land acquisition, environmental clearances and design changes, and “by December” has been said before. For Sindhudurg specifically, though, the benefit is already largely banked.

SEA — THE MUMBAI-VIJAYDURG RO-RO

A genuinely new channel. The Ro-Pax vessel *M2M Princess* began operating from Bhaucha Dhakka (Ferry Wharf) to Vijaydurg on **1 March 2026**, cutting the journey to roughly six to seven hours against twelve by road, with sixteen trips planned in the first month. Fares were set at ₹2,500 economy and ₹4,000 premium economy, with ₹1,000 for a two-wheeler and ₹6,000 for a car; the

inaugural sailing carried about 390 passengers and 21 cars. Two qualifications: Vijaydurg is in Devgad taluka at the district's northern end, a substantial onward drive from the Kudal-Sawantwadi belt, and a single-vessel seasonal service on the Arabian Sea is not year-round infrastructure. It is a real improvement and a fragile one.

RAIL — KONKAN RAILWAY

Four stations serve the district — Kankavli, Sindhudurg, Kudal and Sawantwadi — and the Mumbai CSMT-Madgaon Vande Bharat has run since June 2023. Electrification is progressing, with a reported ₹1.58 billion package awarded in June 2026. Doubling is a different matter: it is planned, contested by the Save Konkan Ecology Forum on environmental and displacement grounds, and should not be assumed on any particular timetable.

AIR — THE GAP IN THE STORY

This is where a careful reader should slow down. Sindhudurg Airport at Chipi (SDW) is open and growing fast in percentage terms — but from a very low base.

Figure 3 · Sindhudurg (Chipi) airport — spectacular growth rate, very small absolute base

The single most-quoted statistic in Sindhudurg sales decks, shown with the denominator attached.

Source: Sindhudurg Airport (SDW) traffic statistics for April 2025 – March 2026, reported as 73,022 passengers (+398.48%) and 1,566 aircraft movements (+200%). FY 2024-25 figures are back-calculated from those published growth rates and are therefore approximate. FY 2023-24 is not shown: the airport's service pattern in that year makes it a non-comparable base.

Figure 3. The most-quoted statistic in Sindhudurg sales material, shown with its denominator. A ~400% increase off a near-dormant base is a restart, not yet a market.

In FY 2025-26 the airport handled **73,022 passengers** — up 398.48% — across **1,566 aircraft movements**, up 200%. Those growth rates are real and they are quoted everywhere. The absolute numbers are equally real: roughly 200 passengers a day, about three flights, operated by a single carrier, Fly91, to three cities — Pune, Hyderabad and Bengaluru. **None of them is Mumbai.** Maharashtra announced in September 2025 that it would expedite a Chipi-Mumbai service and extend the runway from 2,500 m to around 3,000 m; a Navi Mumbai-Sindhudurg

service was announced to start on 15 August 2026, and as at February 2026 it has not begun.

The practical gateway today is therefore **Goa**. Manohar International Airport at Mopa (GOX) is roughly 14 km from Sawantwadi — a sub-thirty-minute drive to parts of the corridor — with reported passenger growth of 26.6% year on year in 2024. Any honest assessment of Sindhudurg's air access should credit Mopa, not Chipi, as the thing that changed. That is also a concentration: one airport in another state, reached by one road.

10

The catalyst pipeline, graded by evidence

Sindhudurg marketing compresses a decade of heterogeneous announcements into one sentence: “massive infrastructure is

coming”. Separated out and graded, the picture is more useful — and considerably less uniform.

Figure 4 • Infrastructure catalyst timeline — sorted by how firm the commitment actually is

Every catalyst cited in Sindhudurg marketing, placed on one axis and colour-coded by evidence class rather than by enthusiasm. Bars are indicative durations, not contract programmes; grey hatched bars are concepts with no sanctioned timetable and their end-points should be read as “unknown”, not as forecasts.

HOW TO READ THIS

Green and teal — already banked

Delivered or operating. Mopa and Chipi are open, the Vande Bharat runs, the district's NH-66 stretch is effectively done and the Ro-Ro sails. Every one of these is already reflected in the land price quoted today. Buying now does not capture this value — it pays for it.

Blue and purple — contracted

Funded and awarded: the balance of the NH-66 corridor and the Konkan Railway electrification package. Reasonable to underwrite in a holding-period assumption, with a generous slippage allowance. NH-66 alone has moved its completion date repeatedly over a decade.

Gold and grey — announcements

The Film City, the Aerocity, the runway extension and the ₹70,000 cr greenfield Konkan Expressway carry no traceable sanctioned DPR, award or funded programme. They may all happen. None is a schedule, and none belongs in an entry valuation as though it were.

Red and amber — the calibration

The Navi Mumbai-Chipi link was announced with a firm date; the date passed with no service. That is the base rate at which this district's promises should be discounted. The amber band is God City itself — and the row a buyer actually needs, the MahaRERA registration, is grey.

Sources: NHAI/MSRDC (NH-66, Konkan Expressway DPR and EC status); Konkan Railway Corporation and reported electrification award, June 2026; Maharashtra Maritime Board / operator (Ro-Ro, 1 Mar 2026); MTDC and Maharashtra Tourism (submarine + underwater museum, ₹110.58 cr; Ex-INS Guldar scuttled 19 May 2026); IHCL press release and MTDC tripartite agreement (Shiroda-Velagar); MIDC (Adali); Airports Authority of India and Fly91 schedules (Chipi, Navi Mumbai link); Ministry of Corporate Affairs (God City LLP, LLPIN ACF-3634, incorporated 6 Feb 2024). Compiled February 2026.

Figure 4. Every catalyst cited for Sindhudurg, on one axis, colour-coded by evidence class rather than by enthusiasm. The three God City rows at the foot are shown on the same basis as everything else.

The discipline this chart imposes is simple. **Delivered and operating** catalysts — Mopa, Chipi, the Vande Bharat, the district's NH-66 stretch, the Ro-Ro, the approved CZMP — are already capitalised into asking prices. Buying today does not capture them; it pays for them. **Contracted** items — the balance of NH-66, the Konkan Railway electrification package — are reasonable to underwrite with a generous slippage allowance. **Announced** items are a different category of claim altogether.

One thing that is frequently conflated, and should not be

Two separate road projects are routinely merged in reporting and in sales decks. The first is the **four-laning of NH-66**: 466 km, Panvel to Sindhudurg, under NHAI, largely built, finishing around 2026-27. The second is the **greenfield Konkan Expressway**: a proposed 389 km six-lane access-controlled highway by MSRDC from Chirle (Panvel) to Patradevi on the Goa border, budgeted at around ₹70,000 crore, whose revised DPR was completed in

December 2024 and whose environmental clearance is still answering queries, with the alignment being reworked to avoid the Western Ghats eco-sensitive zone. These are different roads, at completely different stages. Any statement of the form “the ₹70,000 crore expressway opens in 2026” has merged them.

THE CALIBRATION POINT

The Navi Mumbai-Chipi air service was announced with a specific date — 15 August 2026 — and that date passed without a service. It is the cheapest available lesson about this district: announcements here carry dates, and the dates slip. Apply that base rate to the Film City, the Aerocity, the runway extension and the greenfield expressway, none of which has a traceable sanctioned DPR, award or funded programme behind it. They may all happen. None of them is a schedule, and none belongs in an entry valuation as though it were.

Tourism, industry and the demand engine

What makes Sindhudurg more interesting than a generic “near Goa” story is that its demand drivers are unusually public-sector-led, which cuts both ways: state projects are slower than private ones, but they are also better documented and harder to invent.

THE IHCL / TAJ HOTEL AT SHIRODA-VELAGAR

A tripartite agreement has been signed between Indian Hotels Company Limited, the Maharashtra Tourism Development Corporation and a representative body of local landholders for a luxury hotel at Shiroda-Velagar in Vengurla taluka — a site referred to in circulating material as roughly 138 acres. The history is instructive: the land was acquired on MTDC's behalf in 1994 and the project stalled for three decades on compensation disputes, which the state has now worked to resolve. A Taj on this coast would be a genuine anchor for the premium second-home market. It is also a project whose first attempt took thirty-two years to get to an agreement.

INDIA'S FIRST SUBMARINE AND UNDERWATER MUSEUM PROJECT

The most distinctive item in the pipeline, and the furthest along. Maharashtra sanctioned a **₹110.58 crore** project for passenger submarine tourism off the Sindhudurg coast near Nivati Rocks, centred on an artificial reef and underwater museum. The decommissioned Indian Navy warship **ex-INS Guldar was scuttled on 19 May 2026** at a depth of about 22 metres — a physical, completed, irreversible act rather than an announcement. The programme envisages a 24-seater submarine plus guided wreck diving and tiered scuba experiences to 12, 18 and 30 metres, with public bookings expected during 2026 after safety clearances. If it runs, it gives the district something Goa does not have, which is precisely the kind of differentiated draw a tourism-dependent property market needs.

THE AEROCITY AND THE FILM CITY

Both appear constantly in Sindhudurg marketing and both belong firmly in the **ASSERTED** column. An “Aerocity” around Chipi

airport — five-star hotels, retail, offices, exhibition centres — is at concept stage. A roughly 200-acre Film City is proposed at Nandos village near the Goa border. Neither has a sanctioned detailed project report that this report could trace. The frequently repeated claim that Sindhudurg property prices have risen 25–30% “courtesy of” the Taj, the Aerocity and the Film City comes from a promotional press release issued by a firm selling plots in that market, and should be read accordingly.

INDUSTRY: THE ADALI PHARMA HUB

MIDC has proposed a dedicated pharmaceutical hub at the **Adali Industrial Area** in Sawantwadi taluka, with internal roads, power adequate for energy-intensive pharmaceutical operations and water infrastructure reported as already laid. Kudal supports the district's other MIDC area. The strategic logic is sound — Mopa airport is about 14 km away, NH-66 and the Konkan Railway are adjacent, and the stated aim is to stop local graduates migrating to Goa for work. If it lands, it is the single most valuable development for the district's property market, because it would create the one thing Sindhudurg currently lacks: **local, year-round, salaried demand** rather than seasonal outside demand.

THE POLICY TAILWIND

Maharashtra's Tourism Policy 2024 is materially generous to exactly this kind of project: capital subsidy of up to ₹20 crore or 20% of eligible capital investment for hospitality ventures, 15% or up to ₹15 crore for a range of tourism facilities, SGST reimbursement, electricity-duty exemption, interest subsidy of up to 5%, relaxed FSI in designated zones and fast-track approvals in 30–60 days, across 50 designated tourism hubs including Konkan beaches. A resort-led township is a plausible beneficiary. Note, though, that these incentives accrue to the **developer or operator**, not to a plot buyer — a distinction worth holding on to when the policy is cited in a sales conversation.

The market

What land actually costs in Sindhudurg at each rung of the ladder, what the same 600 square yards costs six different ways, and what this district is really competing with in India's second-home market.

12

The land-value ladder

The most useful thing to understand about Sindhudurg land is that there is no single price, and the variation is not mainly geographic. It is a function of **how far up the development ladder a parcel has been carried**. The same acre can be quoted

at ₹150 per square foot or ₹3,500 per square foot depending on whether it is an interior agricultural field, a road-fronting parcel, a converted N.A. plot, a plot inside a serviced gated layout, or a sea-view plot in a branded scheme.

Figure 5 • The Sindhudurg land-value ladder — the same acre, priced five different ways

A plot buyer and a land buyer are not in the same market. The gap between the columns is the single most important commercial fact in this district, and it is the gap a 150-acre plotted township is built to monetise.

Cells outlined in orange are anchored to an actual observed listing or published band (label beneath the figure). Every other cell is an indicative interpolation built from those anchors and from the reported ₹1,000–2,000 / sq ft inland and ₹3,000–6,000 / sq ft sea-view ranges. Treat the pattern as directional and the individual numbers as hypotheses to be tested against the e-ASR ready-reckoner rate and three live comparables before any offer is made. 1 guntha = 1,089 sq ft; 1 acre = 40 guntha.

Observed anchors → Kudal, residential plot 2 km from the railway station: ₹4.0 lakh/guntha (₹367/sq ft) · Kudal, 22-guntha parcel at ₹55 lakh: ₹2.5 lakh/guntha (₹230/sq ft)

Sources: live listing data from 99acres and Real Estate India for Kudal, Malvan and Sawantwadi (2025-26); published Pressy8 bands for Mopa-side gated layouts; reported ₹1,000-2,000 (inland) and ₹3,000-6,000 (sea-view) per sq ft ranges for Sindhudurg plots. Listing asks are not transaction prices and typically sit above them. Nothing here is a valuation of any specific parcel.

Figure 5. Cells outlined in orange are anchored to an observed listing or a published band; the rest are interpolations from those anchors. Read the pattern, not the individual numbers.

The anchors this is built on

Four observations carry the chart, and all four are worth stating in their original units so they can be checked. In **Kudal**, residential plots about two kilometres from the railway station have been listed at **₹4 lakh per guntha** — ₹367 per sq ft — while a 22-guntha parcel has been listed at ₹55 lakh, or **₹2.5 lakh per guntha** (₹230 per sq ft). At **Achara in Malvan taluka**, sea-face land has been listed at **₹3 lakh per guntha** (₹275 per sq ft). On the **Mopa side around Sawantwadi**, gated-layout plots are quoted at **₹7,000-9,500 per square yard** (₹778-1,056 per sq ft). And across the district, plots are reported in a band of ₹1,000–2,000 per sq ft inland and ₹3,000–6,000 per sq ft for sea-view parcels.

Set the Achara figure against the sea-view band and the point becomes unmissable. **Raw sea-face agricultural land at ₹275 per sq ft; developed sea-view plots at ₹3,000-6,000 per sq ft.** That is an order of magnitude, and it is not created by scarcity of coastline. It is created by the work of conversion, layout sanction, servicing, amenity and branding — which is to say, it is the developer's margin plus the buyer's convenience premium.

WHAT THIS MEANS FOR A PLOT BUYER

When you buy a serviced plot in a gated township you are buying two things at once: a piece of land, and a bundle of work performed on it. The land component is checkable against the ready-reckoner rate and against raw-land comparables. The work component is only worth what it delivers — and if the roads, drainage, water, power and amenities are not actually built, you have paid a developed-land price for a field. That is risk R8 in **Figure 10**, it is the most common failure mode in Indian plotted development, and it is why section 27 insists that amenity obligations, the maintenance corpus and the handover mechanism all appear in the agreement rather than in the brochure.

One methodological caution applies to the whole of this section. **Listing asks are not transaction prices.** Portal listings in thin rural markets typically sit above achieved values, sometimes substantially, and they persist unsold for long periods. The only reliable price evidence is registered transaction data from the sub-registrar for the specific village, read alongside the e-ASR ready-reckoner rate. That is task E-2 in **Figure 14**, and it is not optional.

13

The entry ticket, and the competitive set

Converting every rung of the ladder into one comparable unit — a ~600 square yard (≈5,400 sq ft) villa plot, the standard product in this market — makes the choice facing a buyer concrete.

Figure 6 · What it actually costs to get in — the same 600 sq yd, six rungs of the ladder

Converted to a single comparable unit so the rungs can be read against each other. The North Goa figure is the developer's own comparison and should be treated as marketing, not as an independent valuation.

Where God City's band sits is unknown, and that is the point. The promoter publishes a 150-acre scale, a Hafeez Contractor master plan and a Goa-adjacent location, but no rate card, no plot schedule and no MahaRERA registration. The dashed bar above is drawn wide deliberately: it spans everything from "Sawantwadi gated layout pricing" to "Goa-substitute pricing", and nothing in the public domain narrows it.

Sources: Kudal and Malvan listing data (99acres, RealEstateIndia, 2025-26) converted at 1 guntha = 1,089 sq ft; published Mopa-side gated-layout rates of ₹7,000-9,500 per sq yd; SSL Realty / Cida De Luxora published pricing of ₹45-55 lakh for 600+ sq yd plots and its own stated North Goa comparison of ₹1.5-2.0 crore. God City LLP publishes no price. Figures exclude stamp duty (on the higher of agreement value or ready-reckoner rate), 1% registration, GST where applicable, development charges and construction.

Figure 6. The same 600 square yards, six ways. The dashed bar is God City: drawn wide on purpose, because nothing in the public domain narrows it.

Who else is selling this story

Sindhudurg's plotted-development market is real and already competitive, though fragmented and small-scale. The most visible branded comparable is **Cida De Luxora**, marketed by SSL Realty — an eleven-acre gated, Roman-themed community on the Mopa side with 600+ square yard villa plots, clubhouse and wellness landscaping, priced at **₹45-55 lakh** and explicitly positioned against a stated North Goa comparable of ₹1.5-2 crore. Others market sea-touch plotting near Malvan, including a scheme described as "Ocean's Paradise" across a similar 150-acre footprint with private beach access. Alongside these sit dozens of unbranded local layouts of five to fifteen acres with no planning depth, and a substantial informal market in raw agricultural land bought directly from farmers.

Against that set, **God City's differentiation is genuine**: at ~150 acres it would be an order of magnitude larger than the typical branded competitor, it clears the 40-hectare Integrated Township Policy threshold that unlocks real fiscal concessions (section 16), and the Hafeez Contractor engagement — if confirmed — puts it in a different planning class entirely. Scale of that kind is not a gimmick in plotted development; it is what makes internal roads, a sewage treatment plant, a genuine clubhouse and long-horizon open space financially possible at all. Eleven acres cannot carry that infrastructure. One hundred and fifty can.

But scale cuts both ways, and this is the point on which the whole proposition turns. A 150-acre scheme is roughly fourteen times the assembly problem, fourteen times the approvals burden and — as **Figure 16** sets out — something like fourteen times the capital requirement of an eleven-acre one. A small layout by a local

developer with clean title is a modest, comprehensible risk. A very large layout by a two-year-old entity with no disclosed site is a much larger one. The correct conclusion is not that bigger is

worse; it is that **bigger raises the evidentiary bar**, and at present the evidence has not been supplied.

14

Where this sits in India's second-home market

India's second-home market is estimated at roughly **US\$3.2 billion**, with the retirement and second-home segment projected to reach about US\$4.0 billion in 2026 on reported growth of around 23.6% a year, and luxury second-home demand growing at approximately 20% annually. The established destinations — Goa, Alibaug, Lonavala — carry average property values of roughly **₹9,860 to ₹15,000 per square foot**, and Alibaug property is reported to have grown over 150% in a decade, helped latterly by the Atal Setu and its own Ro-Ro service.

Two cautions before those numbers are used. First, ₹9,860-15,000 per sq ft is **built-property** pricing and cannot be compared directly with Sindhudurg **land** rates of ₹1,000-2,000 per sq ft; comparing them is the single most common sleight of hand in coastal plot marketing. Second, those market-size and growth figures come from industry and developer sources, not from an official statistical series.

What survives the caution is the structural argument, and it is a good one. Goa is the largest and most diversified second-home market in the country and carries the highest gross rental yield potential — but it is expensive, crowded and, for non-Goan buyers, legally and politically complicated. Alibaug offers a lower entry price and superior appreciation but is tied to Mumbai weekend demand. **Sindhudurg's proposition is Goa's coastline, Goa's airport and roughly a third to a tenth of Goa's land price, inside Maharashtra's legal system.** For a Mumbai or Pune buyer that is a real and coherent arbitrage, and it is the reason this district deserves attention rather than dismissal.

The arbitrage has a clock on it, though, and it is worth being clear-eyed about which way that clock runs. Arbitrages of this kind close when supply arrives — and branded supply is arriving now. The window is real; it is simply not as wide as “Goa was ₹1 crore, this is ₹50 lakh, therefore it doubles twice” implies. **Figure 17** works through what appreciation is actually required just for a buyer to break even.

Law, land and regulation

The rules that decide whether a plot legally exists, whether you may buy it, whether anything may be built on it — and the one registration that converts a brochure into an enforceable contract.

15

MahaRERA — the gate everything else hangs off

The Real Estate (Regulation and Development) Act 2016, administered in Maharashtra by MahaRERA, is not a formality to be cleared later. For a plot buyer it is the entire architecture of protection, and its thresholds are wide enough that essentially no township can escape them.

WHEN REGISTRATION IS COMPULSORY

Under section 3, a real estate project must be registered if **the land proposed to be developed exceeds 500 square metres or the number of plots or apartments exceeds eight**, inclusive of all phases. Exemption requires *both* limbs to be satisfied — 500 m² or less *and* eight units or fewer. A 150-acre scheme is roughly 607,000 square metres. There is no argument to be had.

EACH PHASE IS A SEPARATE PROJECT

This is the detail most often missed by buyers, and it is worth internalising: **a registration number for Phase I says nothing whatever about the plot you are being sold in Phase II**. Each phase requires its own registration, with its own timeline, its own escrow account and its own enforceable completion date. Winsten Park, as it happens, illustrates the pattern exactly — three phases, three separate UP RERA numbers, three different completion dates spanning 2020 to 2028. When a registration number is eventually produced for God City, the first question is which phase it covers and whether it covers the specific plot on offer.

WHAT REGISTRATION ACTUALLY GIVES A BUYER

- **A named promoter.** A specific legal person against whom rights are enforceable — not a brand.
- **A committed completion date**, from which interest for delay runs under section 18. Without registration there is no such date, and therefore no such remedy.
- **The 70% escrow rule.** Seventy per cent of every receipt must go into a designated account, with withdrawals certified by the architect, the engineer and a chartered accountant. This is the single most important protection in the Act, and it does not exist before registration.

16

The Integrated Township Policy at 150 acres

At approximately 150 acres, this scheme sits above a threshold that changes its regulatory character entirely. Maharashtra's Integrated Township Policy applies to projects of at least **40**

- **Disclosure.** Sanctioned plans, land title documents, the area statement, the phase structure and quarterly progress updates, all published on the portal.
- **A forum.** Complaints can be filed for a fee typically in the ₹1,000–5,000 range, with cases intended to be decided in about sixty days.

AND WHAT IT PROHIBITS

A project over the section 3 thresholds **may not be advertised, marketed, booked or sold before it is registered**. That prohibition binds the promoter, and it also exposes the agent: a channel partner working an unregistered project puts their own MahaRERA agent registration at risk. This is why **Figure 19** gives brokers a different verdict from buyers.

THE FINDING, RESTATED PLAINLY

A search of MahaRERA's project register, its lapsed-project list and its suspended and abeyance lists, together with general web search, returned **no registration for this project** in February 2026. Meanwhile the promoter's website is live, the blog is publishing, and a channel-partner recruitment programme is running. That sequence — distribution before registration — is the single most consequential fact in this report.

THE DISTRICT'S ATTRITION RATE

One further number puts this in context. MahaRERA has kept roughly **1,750 lapsed projects in abeyance** across Maharashtra and initiated suspension for around 1,137 more. **Twenty-three of those projects are in Sindhudurg district alone**. In a district with fewer than thirty towns and a modest development pipeline, twenty-three stalled registrations is not a rounding error. Execution attrition here is the norm, not the exception — which is the empirical basis for risk R17, and a good reason to check the abeyance list as well as the live register.

hectares — about 100 acres — in one contiguous piece of land. That is both an opportunity and a set of binding obligations, and a buyer should understand both.

WHAT THE POLICY REQUIRES	WHAT THE DEVELOPER GETS
A minimum of 40 ha as one contiguous parcel	50% concession on stamp duty — on the developer's land purchase, and on the first transaction with a purchaser of a constructed unit

Ownership of all land parcels by the project proponent	Up to 50% exemption from development charges
At least 15% of residential FSI reserved for social housing	A defined approval route, with the Collector required to clear or give reasons within 45 days
Allocation for parks, playgrounds and community facilities	Government direction on the supervising authority where more than one has jurisdiction

Three consequences deserve emphasis.

Contiguity and full ownership are hard. Assembling 40+ hectares of contiguous land in the Konkan, where holdings are small, fragmented, frequently jointly owned across large families and often burdened with tenancy or Inam entries, is a formidable exercise. It is also the exact point at which a single hold-out parcel in the middle can defeat the whole scheme. The policy requires the proponent to **own** the parcels — not to hold options or agreements to sell. That is risk R2, and it is why the first document to ask for after the registration number is the aggregation status, gat number by gat number.

17

Who may buy land here, and what makes it buildable

Two separate legal questions are constantly conflated in plot sales, and getting them the wrong way round is expensive. The first is *may I lawfully buy this?* The second is *may anything lawfully be built on it?* A clean answer to the first tells you nothing about the second.

SECTION 63 — WHO MAY BUY AGRICULTURAL LAND

Under section 63 of the Maharashtra (formerly Bombay) Tenancy and Agricultural Lands Act 1948, sale of agricultural land is restricted to persons who are certified agriculturists. **A non-agriculturist cannot purchase farmland without the Collector's prior written permission.** The 2016 amendment created important carve-outs: the bar does not apply to land within the limits of a Municipal Corporation or Municipal Council, nor to land within the jurisdiction of a Special Planning Authority or New Town Development Authority where it has been allocated to residential, commercial, industrial or other non-agricultural use. Most of rural Sindhudurg falls outside those carve-outs. A Mumbai professional buying a field near Kudal needs to know which side of that line the parcel sits on, before signing anything.

The 15% social housing obligation is real. It is a genuine cost and a genuine planning constraint, and it changes the product mix. A buyer paying a luxury premium is entitled to know where in the master plan that component sits.

And the concession benefits the developer, not you. The 50% stamp duty concession attaches to the developer's land purchase and to the first transaction in a *constructed* unit. A plot buyer should not assume it flows through to their own conveyance, and should get any such claim in writing before relying on it in a cost calculation.

N.A. CONVERSION — WHAT MAKES LAND BUILDABLE

Buying lawfully does not make land buildable. Non-agricultural permission under the Maharashtra Land Revenue Code is a separate process, requiring an application to the Collector with the 7/12 extract, property card, layout plan and relevant NOCs, followed by scrutiny, site inspection and payment of conversion charges. **A plot sold before the N.A. order is granted is a promise, not an asset** — and MahaRERA has indicated that a finalised sub-division layout, the necessary authority approvals and N.A. permission where applicable are what denote a plotted project's completion.

THE KONKAN'S SPECIFIC TENURE TRAPS

This is where outside buyers lose money, and it repays reading slowly. Nothing on a 7/12 extract announces a title defect in plain language; you have to know which entry to look for and, more often, what is conspicuously missing behind it. The column that matters is **Itar Hakk** — “other rights” — which records government interest, grant conditions, tenancy rights, mortgages, court orders and any requirement for the Collector's permission to transfer. A blank Itar Hakk column is good news. An entry in it is a stop sign.

TRAP	WHAT IT IS	WHY IT BITES
Kul (tenancy) rights and section 32G	Kul Kayda gives long-term tenant farmers security of tenure and a statutory route to ownership. A 32G entry records that process.	A parcel whose 32G tenant entry was quietly deleted without a proper certificate deserves close scrutiny. Tenancy claims can surface years after purchase.
Devasthan and Inam land	Land granted to or held for a religious institution or under an inam/watan tenure.	Devasthan land is frequently treated as inalienable — not transferable at all. Where transfer is possible it needs government permission and, typically, Charity Commissioner approval.
Occupant Class-II (new tenure)	Land held on restricted tenure — granted, allotted or converted subject to conditions.	Cannot be freely resold. Requires prior sanction and usually payment of a premium. A sale without sanction can be void.
Private forest	Land swept into the Maharashtra Private Forests (Acquisition) Act.	Has stranded Konkan and Karjat parcels for decades. Often invisible without a specific classification-history check.

None of these can be screened without survey numbers. That is the practical reason **Figure 13** puts “can you see the village and gat numbers?” at question three and refuses to proceed past it —

not pedantry, but the fact that the entire Konkan risk set lives in documents that are indexed by survey number and by nothing else.

CRZ, the Western Ghats ESA, and the wildlife corridor

Sindhudurg is squeezed between two of India's more assertive environmental regimes. Both are capable of removing the right to build while leaving the purchase price fully paid.

THE COASTAL REGULATION ZONE

Under the CRZ Notification 2019, the coast is classified into CRZ-I (ecologically sensitive), CRZ-II (developed urban stretches), CRZ-III (rural stretches, sub-divided into IIIA and IIIB by population density) and CRZ-IV (water bodies). **The Sindhudurg coast is largely CRZ-III B, which carries a No-Development Zone of 200 metres from the High Tide Line.** Within that NDZ no construction is permitted, subject to narrow exceptions for repair or reconstruction of existing authorised structures within existing FSI, plinth and density, for activities specifically permitted under the notification, and for dwellings of traditional coastal communities including fisherfolk.

Three practical points. The regulator is the Maharashtra Coastal Zone Management Authority, and the **Sindhudurg Coastal Zone Management Plan was approved in 2023** — so an authoritative map now exists. CRZ is not triggered only by the sea: creeks and tidal rivers draw land into the CZMP as well, which catches inland parcels that feel comfortably far from the beach. And applicability is determined **survey number by survey number** against the approved plan, not by eyeballing a distance on a satellite image. The line in **Figure 1** is conceptual and should be treated as such.

THE WESTERN GHATS ESA AND THE SAWANTWADI-DODAMARG CORRIDOR

On the eastern flank, the Western Ghats Ecologically Sensitive Area process continues at national level, with Maharashtra having included some 2,092 villages in draft notifications. More specifically for this district, the **Bombay High Court has directed that 25 villages in Dodamarg and Sawantwadi talukas be notified as an ecologically sensitive area** under the Environment (Protection) Act 1986 — with the state directed to

submit a proposal to the Ministry of Environment, Forest and Climate Change and the Ministry directed to issue a final notification thereafter. The court expressly held that this corridor's designation should not wait on the broader Western Ghats notification, which is acknowledged to be a longer process. The state has separately funded a study of tiger corridors in the Dodamarg-Sawantwadi belt.

WHY THIS IS NOT A FOOTNOTE

The Sawantwadi-Dodamarg belt is **exactly** the Mopa-adjacent area that Sindhudurg's plot marketing promotes most heavily — closest to the airport, closest to Goa, most in demand. An ESA notification over those villages would constrain construction, quarrying and land-use change in ways that are not yet fully defined. Any 150-acre assembly in that belt must be checked against the corridor village list, and a buyer is entitled to a written answer on it. This is risk R5, and it is scored as moderate-likelihood/high-impact for exactly this reason.

STAMP DUTY, THE READY RECKONER, AND THE PRICE YOU ACTUALLY PAY

One fiscal mechanic completes the picture, because it defeats a common negotiating assumption. **Stamp duty in Maharashtra is charged on the higher of the agreement value or the ready reckoner rate** — never the lower. Ready reckoner rates rose by an average of about 3.89% across Maharashtra for FY 2025-26, and about 3.7% in rural areas, and the applicable rate is looked up by district, taluka, village and survey number on the state's e-ASR portal. Registration is 1% of value, capped at ₹30,000 for properties above ₹30 lakh. The practical implication: a “discount” negotiated off an inflated headline may not reduce the duty at all, and the ready-reckoner rate is also the cheapest independent sanity check available on whether a quoted price is sane. **Look it up before the first meeting, not after.**

The approval pathway, end to end

Sections 15 to 18 describe individual rules. **Figure 12** puts them in sequence, because the order is what actually governs a township's programme: several of these stages cannot begin until

the one above is complete, and the whole chain is invisible from a brochure.

Figure 12 · The approval pathway — ten gates a 150-acre Konkan township has to pass, in order

This is the work programme behind the phrase “coming soon”. Each stage has a named authority, a statutory basis and a real failure mode; several cannot start until the one above is finished. As at February 2026 God City has published no evidence of clearing any of them — and stage 7 is the one that converts a marketing claim into an enforceable contract.

Statutory basis: Maharashtra Tenancy and Agricultural Lands Act 1948 (s.63, as amended 2016); Maharashtra Land Revenue Code (N.A. conversion); Maharashtra Integrated Township Policy (40 ha minimum, contiguity, 15% social housing, 50% stamp-duty concession, 45-day Collector decision); CRZ Notification 2019 and the Sindhudurg Coastal Zone Management Plan approved 2023 (CRZ-III B, 200 m NDZ); Bombay High Court directions on the Sawantwadi-Dodamarg corridor; Real Estate (Regulation and Development) Act 2016 s.3, s.4(2)(I)(D) and s.18 as administered by MahaRERA. Sequence and stage grouping are this report's construction; actual processing is partly parallel and varies with the Collectorate.

Figure 12. Ten gates, each with a named authority, a statutory basis and a real failure mode. Stage 7 is the one that converts a marketing claim into an enforceable contract, and everything below it is unavailable to a buyer until it is crossed.

Two things are worth drawing out of the chart. First, **the buyer's protections all sit below the gate**. Escrow, a committed date, delay interest, quarterly reporting, a complaints forum — every one of them is a consequence of registration. Money paid before stage 7 buys none of them. Second, **stages 1 to 6 are where the**

real work is, and they are entirely opaque from outside. A promoter who has genuinely completed them has an easy and attractive answer to give; the request in section 27 is designed to make that answer easy to give and conspicuous to withhold.

The economics

What the headline acreage actually contains, what building it would cost, what the named entity is capitalised at — and what a plot really costs the person buying it.

20

What “~150 acres” actually contains

“One hundred and fifty acres” is a land area, not an inventory. Once township planning standards and Integrated Township Policy

obligations are applied, roughly half of any scheme of this kind is not saleable product at all.

Figure 15 · What “~150 acres” actually contains once township standards are applied

Indicative land budget for an Integrated Township Project of this scale. Percentages are typical planning norms applied to the promoter's stated area — God City has published no layout, so this is what the number implies, not what has been sanctioned.

Figure 15. An indicative, ITP-compliant land budget — conventional, not pessimistic. God City has published no layout, so this is what the number implies rather than what has been sanctioned.

On this allocation, about **78 of the 150 acres** are saleable plots, villas and studios. The rest is roads and circulation, statutory open space, the 15% social housing obligation, amenity and clubhouse land, utility land for the sewage and water treatment plants and the substation, and buffers for CRZ, watercourses and any ESA overlay. The buffer line is a placeholder: on a coastal parcel it can be very much larger, and it cannot be estimated at all until the survey numbers are known.

Two consequences follow. For the developer, **the revenue base is roughly half the land area**, and that half has to fund the servicing of the whole. For the buyer, “150 acres” conveys almost nothing about how many plots will exist, how large they will be, how much open space will survive later phases, or where the affordable component sits in the plan. **Only a sanctioned layout answers those questions**, which is why it appears at question three of the decision tree rather than as a nice-to-have.

21

What it costs to build, and what the entity is capitalised at

The following build-up is **CONSTRUCTED** — an order-of-magnitude estimate from stated assumptions, not a cost plan and not a

valuation. Its purpose is narrow: to establish the *scale* of capital that the promise implies, because that scale is what a buyer is being asked to trust.

Figure 16 · What a 150-acre township costs to build — and what the named entity is capitalised at

An order-of-magnitude build-up, not a valuation. Every input is an assumption and is stated as one; the purpose is to establish the scale of capital the promise implies, because that scale is the thing a buyer is being asked to trust.

Assumptions: land at ~₹250 per sq ft across 6.53 million sq ft (150 acres); stamp duty at Maharashtra rates net of the 50% Integrated Township Policy concession, plus registration, N.A. and development charges; trunk infrastructure at ~₹250 per sq ft over ~55% saleable area; marketing and channel at ~6% of an assumed gross development value; finance and contingency at ~15% of the preceding lines. These are planning-grade figures for establishing magnitude and should not be relied on as a cost plan. The ₹1,00,000 figure is the total contribution recorded against GOD CITY LLP (LLPIN ACF-3634) in Ministry of Corporate Affairs data.

Figure 16. Roughly ₹389 crore of capital implied, against ₹1,00,000 of recorded partner contribution. The panel explains why this is a question rather than an accusation — and why it is a question that deserves a written answer.

LINE	₹ CRORE	ASSUMPTION
Land assembly, ~150 acres	165	≈ ₹250 per sq ft across 6.53 million sq ft
Duties and statutory charges	12	Stamp duty net of the 50% ITP concession, plus registration, N.A. and development charges
Design, approvals and consultants	14	Master planning, engineering, environmental and legal
Trunk infrastructure	96	Roads, storm-water, water supply, STP, power network at ≈ ₹250 per sq ft over ~55% saleable area
Amenities and clubhouse	26	The amenity package the positioning implies
Marketing, channel and establishment	34	≈ 6% of an assumed gross development value
Finance cost and contingency	42	≈ 15% of the preceding lines
Indicative total capital requirement	389	Against ₹1,00,000 of recorded partner contribution — a ratio of about 1 : 389,000

It is important to be fair about what this does and does not show. An LLP's contribution figure is a poor proxy for the resources behind a project: developers routinely build through project-level SPVs, landowner joint ventures where land is contributed rather than bought, development-management agreements where the developer never owns the land at all, construction finance, and customer advances. Any of those structures could be in place here, and the ₹165 crore land line would fall away entirely under a joint-venture model.

But that is precisely the point, and it reframes the question usefully. **Some structure must be carrying this, and the buyer**

has not been told which one. The right response is not alarm; it is a specific question: *what is the funding structure, which entity holds the land, and what is on its balance sheet?* And there is one answer that should give pause. If the funding model is that **customer advances will pay for the trunk infrastructure**, then the plot buyer is functioning as the project's lender — taking development risk, on an unsecured basis, at a return of zero. That is exactly the arrangement the 70% escrow rule under RERA exists to control, and it is the reason registration is not a technicality.

22

The buyer's arithmetic

Whatever price is eventually published, the arithmetic below is the template to run it through. It is worked on an illustrative 5,400 sq ft (~600 sq yd) plot at ₹1,000 per sq ft — the mid-point of

observed Mopa-side gated-layout rates — and every line is a real, unavoidable cost.

Figure 17 · The buyer's arithmetic — all-in entry cost, and the hurdle it creates on exit

Worked on an illustrative 5,400 sq ft (~600 sq yd) plot at ₹1,000 per sq ft — the mid-point of observed Mopa-side gated-layout rates. God City publishes no price, so this is a template to run the promoter's number through, not a quote.

WHAT THE TWO CHARTS SAY TOGETHER

The brochure price is not the price.

On these assumptions a ₹54 lakh plot costs ₹64.9 lakh to own — 20% more — before a single brick is laid. Stamp duty is charged on the higher of agreement value or the ready-reckoner rate, so a “discount” off an inflated headline may not reduce it at all.

That gap sets the real hurdle.

Including a 2% exit cost the plot must reach about ₹66 lakh before the buyer is square. At 8% a year that is roughly 3 years; at 3% it is 7. Any shorter holding period is a loss dressed up as an appreciating asset.

The scenarios are not symmetric.

The bull case needs the announced catalysts to land. The bear case needs only for them to slip. And a plotted scheme that stalls before its amenities are built does not track the bear line at all — it trades below raw land, because a stranded plot inside an unfinished layout is harder to sell than a field.

That tail is not drawn here.

It is the one worth insuring against — and the only reliable insurance is refusing to pay until the gates in Figure 13 are cleared.

Assumptions: Maharashtra stamp duty taken at 6% (the applicable rate varies with location and buyer category, and any Integrated Township Policy concession attaches to the developer's land purchase, not automatically to the buyer's); registration at 1% capped at ₹30,000; professional fees, development charges and maintenance corpus at indicative market levels; exit cost at 2% brokerage. Ready-reckoner rates rose ~3.89% on average across Maharashtra for FY 2025-26 and ~3.7% in rural areas. Illustrative arithmetic for stress-testing an offer — not a forecast, a valuation, or tax advice.

Figure 17. The brochure price is not the price, and the gap sets the hurdle. On these assumptions the plot must reach roughly ₹66 lakh before the buyer is square — which at 8% a year takes about three years, and at 3% takes about seven.

Three conclusions travel beyond this particular example.

The all-in cost runs roughly 20% above the headline. Stamp duty, registration, legal and survey work, development or infrastructure charges and the maintenance corpus are not optional extras. And because stamp duty is levied on the higher of agreement value or ready-reckoner rate, a negotiated discount off an inflated headline may not reduce it at all.

The break-even is later than it feels. Add a modest 2% exit cost and the resale price has to recover the whole all-in figure before a rupee of gain exists. Anyone underwriting a two- or three-year flip in this market is, on these numbers, underwriting a loss unless appreciation runs at the top of the range.

The downside is not symmetrical with the upside. The bull case requires the announced catalysts to land; the bear case requires only that they slip. And there is a tail that no smooth CAGR line captures: **a plotted scheme that stalls before its amenities are built does not trade like raw land — it trades below it.** A stranded plot inside a half-finished layout, with no association, no maintained roads and no water connection, is

harder to sell than an open field, because the field at least has an agricultural buyer. That tail is not drawn in **Figure 17**, and it is the one genuinely worth insuring against. The only reliable insurance is refusing to pay before the gates in **Figure 13** are cleared.

ONE FINANCING CONSTRAINT THAT SHAPES THE WHOLE MARKET

Plot loans in India in 2026 typically run at **60-75% loan-to-value**, tenures of **10 to 15 years** and rates of roughly **8.5% to 11.5%** — higher than standard home loans, because lenders price raw land as riskier. Lenders generally require the plot to be for residential use and within municipal limits, which most rural Sindhudurg layouts are not. And **most Indian banks do not offer plot loans to NRIs at all.** The consequence is structural rather than incidental: this is substantially a **cash market**, on both the buy and the sell side. That is what makes resale slow, thin and price-sensitive, and it is the mechanism behind the illiquidity risk in **Figure 10**. It is also the single strongest argument for buying here only with money that has no timetable attached to it.

Risk

Eighteen exposures, ranked by likelihood and by what they cost; a capability profile measured against what a township of this scale actually demands; and a SWOT with the asymmetry left in.

23

The risk register

Figure 10 • Risk register — eighteen exposures, positioned by likelihood and by what they cost the buyer

Scored from this report's evidence base, Bubble size is likelihood × impact; the number in the register is that product. Note how the cluster is shaped: the heaviest risks are documentary and financial, not environmental or market-cyclical.

Figure 10. Scored from the evidence in this report. Note the shape of the cluster: the heaviest risks are documentary and financial, not environmental or market-cyclical.

Three observations about the distribution, which matters more than any individual score.

The top-right quadrant is almost entirely documentary. R1 (no registration), R2 (incomplete aggregation), R3 (title defects) and R7 (capital inadequacy) are the four heaviest exposures, and every one of them is a question about paperwork and counterparty rather than about Sindhudurg. That is the most encouraging thing in the chart, because documentary risks are the kind that **collapse the moment the documents appear**. A MahaRERA registration and a sanctioned layout would take R1, R2, R4, R5 and R17 down sharply in a single step.

The market risks are mid-table and chronic rather than acute. R9 (exit illiquidity), R11 (announced catalysts failing to land) and R12 (the entry price already embedding delivered infrastructure) will not destroy capital outright, but they are persistent drags that a short-horizon buyer will feel and a long-horizon buyer can absorb. They argue for patience and position size rather than for avoidance.

The environmental risks are real but well down the list. R13 (monsoon, cyclone, landslide) scores as moderate on both axes. This is a wet, occasionally storm-exposed district with landslide-prone terrain inland, and that should be priced — but it is a construction and insurance question, not an existential one, and Maharashtra's Konkan Disaster Mitigation Project is actively funding coastal protection works.

The single risk most likely to be underestimated is **R8 — amenities and internal infrastructure never being delivered after plots are sold**. It scores 17 and it deserves it. In plotted development the developer's incentive to complete collapses once the last plot is sold, because unlike an apartment building there is no handover event that forces completion. The protection is contractual and it must be secured before payment: amenity obligations with dates, a funded maintenance corpus held independently, and a defined trigger for handover to a plot-holders' association. Section 27 puts all three in the information request.

24

Capability profile and SWOT

Figure 9 • Capability profile — measured against what a 150-acre integrated township actually demands

Scores are this report's judgement, applied consistently and shown with their reasoning so a reader can disagree item by item. The shape matters more than any single score: the promoter is strong exactly where marketing is strong, and weak exactly where money is at risk.

Figure 9. Scored against what a 150-acre integrated township demands, with the reasoning shown so a reader can disagree item by item.

The shape is more informative than any individual score. **The promoter is strong exactly where marketing is strong and weak exactly where money is at risk.** Positioning, narrative and channel readiness score well; the master-planner appointment scores well and would score better with confirmation. Corporate vintage, capitalisation, regulatory evidence, entity-level delivery

history, disclosure and local execution depth all score at or below one out of five.

That profile is not unusual for a genuine pre-launch venture, and it is worth saying so plainly. It is also indistinguishable, from outside, from a land-marketing exercise. The only thing that separates the two is documents — which is the argument of this entire report.

Figure 11 • SWOT — the honest version, with the asymmetry left in

Read the diagonal, not the four boxes. Strengths and opportunities are overwhelmingly about the district; weaknesses are overwhelmingly about the promoter — so the location case and the counterparty case must be underwritten separately.

STRENGTHSINTERNAL • HELPFUL	WEAKNESSESINTERNAL • HARMFUL
- Master planning attributed to Architect Hafeez Contractor — a genuinely top-tier, verifiable-in-principle appointment and the single strongest fact in the project. - Scale. At ~150 acres the scheme clears the 40 ha Integrated Township Policy threshold, which unlocks 50% stamp-duty concession and up to 50% relief on development charges — a real structural advantage over 5–15 acre competitors. - Location thesis is sound. Sub-30-minute reach to Mopa, an in-district airport, a four-laned NH-66 and a live Ro-Ro ferry are facts, not projections. - Product fit. Plots, villas and studios at three price points is the right ladder for a market split between end-users, holiday-home buyers and pure investors. - Channel infrastructure is being built early, which usually shortens absorption once a registration exists.	- No MahaRERA registration in the public domain. Until one exists the project may not lawfully be advertised, marketed, booked or sold. - The developing entity is two years old with total partner contribution of ₹1,00,000 — against a scheme whose trunk infrastructure alone is a multi-hundred-crore undertaking. - No delivery track record as an entity. The credential cited belongs to one partner, at another group's project (Winsten Park / VHR Group), in another state. - No site identification at all — no village, no gat or survey numbers — so no title, CRZ, ESA or valuation work can even begin. - No published price, payment schedule, area statement or possession date. - Promoter base and registered office are in Noida; Konkan land tenure and CRZ practice are highly local specialisms.
OPPORTUNITIESEXTERNAL • HELPFUL	THREATSEXTERNAL • HARMFUL
- Sindhudurg is genuinely early. Land is 3–10× cheaper than North Goa and the second-home thesis has not yet been arbitrated away. - A dense, unusually credible public-sector tourism pipeline: the IHCL/Taj hotel at Shiroda, India's first submarine-and-reef museum, the Chipi Aerocity concept and a Swadesh Darshan 2.0 destination designation. - Maharashtra Tourism Policy 2024 offers capital subsidy up to ₹20 crore or 20%, SGST reimbursement, electricity-duty exemption and fast-track approvals for hospitality — directly relevant to a resort-led township. - Access is still improving: NH-66 completion, Konkan Railway electrification, a runway extension and the possibility of a direct Mumbai air link. - First-mover advantage in branded, master-planned supply. Today's competition is mostly 5–15 acre layouts with no planning depth.	- Regulatory tightening on the coast: CRZ-III B imposes a 200 m No-Development Zone, and the Bombay High Court has directed ESA notification for 25 Sawantwadi and Dodamarg villages. - Konkan-specific title risk — kul tenancy, Devasthan/Inam, Occupant Class-II tenure and private-forest classification routinely strand parcels for years. - Announcement risk. The Film City, the Aerocity and the ₹70,000 crore greenfield expressway carry no sanctioned DPR. The missed Navi Mumbai air link is the calibration point. - Financing friction: plot loans run at 60–75% LTV, 10–15 year tenures, 8.5–11.5%, and NRIs are largely ineligible — so demand is thin, cash and cyclical. - Execution attrition is the industry norm: MahaRERA holds 23 Sindhudurg registrations in abeyance and ~1,750 statewide. - Climate exposure: ~4,608 mm of annual rainfall, a rising Arabian Sea cyclone frequency and Western Ghats landslide susceptibility.

Figure 11. Read the diagonal rather than the four boxes. Strengths and opportunities are overwhelmingly about the district; weaknesses are overwhelmingly about the promoter.

A buyer who is completely right about Sindhudurg can still lose money on this specific vehicle. The location case and

the counterparty case have to be underwritten separately, and almost every sales conversation about this project is designed to let the first one carry the second.

The work

What to actually do about all this: nine gates in order, a six-month programme across six workstreams, and the exact list of documents to request in writing.

25

The decision tree

Every question below is answerable from a document. None requires trusting anybody, forming a view about character, or predicting the future. Work down the left column; the moment a

question cannot be answered with paper, stop at that row — the right column says what stopping should look like.

Figure 13 • The decision tree — nine gates, in order, and what to do when the answer is “no”

Every question is answerable from a document. None of them requires trusting anybody. Work down the left column; the moment you cannot answer a question with paper, stop at that row — the right column tells you what stopping should look like. As at February 2026, an enquiry into God City stops at Q1.

Framework constructed for this report from: Real Estate (Regulation and Development) Act 2016 ss.3, 4, 13, 18 as administered by MahaRERA; Maharashtra Tenancy and Agricultural Lands Act 1948 s.63; Maharashtra Land Revenue Code; CRZ Notification 2019 and the Sindhudurg CZMP; Maharashtra Integrated Township Policy; Maharashtra ready-reckoner (e-ASR) practice; and reported Indian plot-loan terms for 2026. It is a diligence checklist, not legal advice — a Maharashtra-qualified advocate and a local surveyor should run every one of these steps on the specific parcel.

Figure 13. As at February 2026, an enquiry into God City stops at Q1. That is not a permanent judgement — it is a statement about what has been published so far.

The tree is deliberately unforgiving at the top and more flexible lower down. Questions 1 to 5 are binary: either the registration, the entity match, the survey numbers, the title opinion and the CRZ and ESA position exist, or they do not, and no amount of reassurance substitutes. From question 6 onward the answers become negotiable — price, financing, amenity obligations are all things to bargain over rather than walk away from.

One instruction at the foot of the tree is worth repeating on its own, because it is the single most useful habit a plot buyer can adopt: even after every gate is cleared, **tie each instalment to a verified milestone rather than to elapsed time** — registration granted, N.A. order issued, layout sanctioned, plot physically demarcated on site, services actually laid. And re-run questions 1 to 6 before each release. Approvals lapse. Phases are registered

separately. The registration that covered Phase I is not the registration that covers your plot in Phase II.

26

The work plan

If the answer to question 1 is ever yes, the following programme is what the rest of the enquiry should look like: twenty-six tasks across six workstreams, with four stop/go gates, over roughly six months.

Figure 14 · The work plan — twenty-six tasks, six workstreams, four gates, about six months

A structured programme for anyone actually evaluating this opportunity, whether as a plot buyer, a channel partner or an investor. Bars are indicative durations; the right-hand label is who should own the task. The four dashed gates are stop/go points — work to the right of a gate should not be commissioned until the gate is cleared.

Programme constructed for this report. Durations assume a single site in one taluka, a cooperating counterparty and normal Collectorate turnaround; contested title, multi-taluka assembly or an ESA question will extend workstreams B and C materially. Costs are not modelled here — as a rough order, workstreams A–C are the cheap ones and workstream D is where professional fees start to matter.

Figure 14. Bars are indicative durations; the right-hand label is who should own each task. Work to the right of a gate should not be commissioned until that gate is cleared.

How the workstreams divide

WORKSTREAM	OWNER	WEEKS	WHAT IT ESTABLISHES
A · Counterparty	You, a CA, an advisor	0–5	Who you would actually be contracting with, what they own, what they have filed, and whether the Hafeez Contractor and Winsten Park claims stand up. Cheap, fast, and it front-loads the questions that most often end an enquiry.
B · Site and title	Advocate, search clerk, licensed surveyor	0–10	The survey numbers, the 7/12 and 8-A records, a thirty-year search, the Itar Hakk analysis, kul/Inam/Class-II/private-forest screening, and a physical boundary walk. This is where Konkan purchases are won or lost.
C · Statutory and environmental	You, an advocate, an environmental consultant	0–11	MahaRERA verification and abeyance-register screening first, because they cost nothing; then the CRZ position against the approved CZMP, the Western Ghats ESA and corridor exposure, and confirmation of the N.A. order and township locational clearance.
D · Technical feasibility	Civil engineer, quantity surveyor	7–13	Water source and bulk allocation tested against both monsoon and April–May yield; power sanction, road access, drainage, flood and landslide screening; and an independent costing of the trunk infrastructure the promoter has committed to.

E • Market and valuation	You, a registered valuer	2-13	The e-ASR ready-reckoner rate for the exact village and survey group, three verified registered comparables from sub-registrar data, absorption and resale depth in the micro-market, and an independent valuation with a downside case.
F • Commercial and closing	You, an advocate	11-26	Price and milestone-linked payment plan, indemnities, the agreement for sale with amenity and CAM schedules, registration and mutation, and post-closing monitoring of quarterly RERA updates and association formation.

THE SEQUENCING RULE, WHICH SAVES THE MOST MONEY

Gate G1 costs nothing and takes an afternoon — it is a lookup on the MahaRERA portal. Run it first, and if it fails, run nothing else. Every workstream below G1 spends real money on advocates, surveyors, valuers and engineers. **The largest avoidable cost in a plotted-land purchase is diligence commissioned on a project that was never registered in the first place.**

27

The information request — every document, in one list

This is the practical output of the whole report. Send it in writing — email, so there is a timestamp — and keep the reply, including any non-reply. A promoter who has done the work will find most of this easy to supply; a promoter who has not will find the list conspicuous to ignore. Either way you learn something, at no cost.

A • THE PROJECT'S LEGAL IDENTITY

1. The MahaRERA registration number for the project, and for the specific phase containing the plot offered.
2. The full legal name, CIN or LLPIN and registered address of the entity named as promoter on that registration.
3. The full legal name and registration number of the entity that will execute the agreement for sale, if different.
4. The name, MahaRERA agent registration number and authority of the person or firm you are dealing with.

B • THE LAND

5. Village name, gat and survey numbers for the entire project land, with the taluka.
6. Current 7/12 extracts and 8-A for every gat number, dated within the last thirty days.
7. Property cards where applicable, and the mutation register entries recording the promoter's acquisition.
8. The aggregation status parcel by parcel: owned outright, agreement to sell, power of attorney, or under negotiation.
9. A title search report and legal opinion by an independent advocate covering at least thirty years.
0. Written confirmation on the Itar Hakk column for each gat: kul or 32G entries, Inam or Devasthan status, Occupant Class-I or Class-II tenure, private-forest classification, mortgages, and any court orders or attachments.
1. Where any parcel was agricultural and the promoter is a non-agriculturist: the Collector's permission under section 63.

C • APPROVALS AND CONSTRAINTS

2. The non-agricultural (N.A.) order under the Maharashtra Land Revenue Code.

13. The sanctioned sub-division layout, with the offered plot identified on it, and the approving authority's endorsement.
14. The Integrated Township Project locational clearance, if the project is proceeding under that policy — and if so, where the 15% social housing component sits in the master plan.
15. A written CRZ position for the project land, referenced to the approved Sindhudurg Coastal Zone Management Plan, and any MCZMA correspondence.
16. A written statement on Western Ghats ESA status and on whether any project village appears on the Sawantwadi-Dodamarg corridor list.
17. Environmental clearance, or a written explanation of why none is required.
18. Water: source, bulk allocation or sanction, and the summer yield assessment.
19. Power sanction from MSEDCL, and the pollution-control consent for the sewage treatment plant.

D • COMMERCIAL TERMS

20. The rate card, the plot schedule with areas, and the payment plan — with each instalment tied to a named, verifiable milestone.
21. The designated (70%) account details and the bank, as recorded with MahaRERA.
22. The draft agreement for sale, in full, with time to have it reviewed.
23. The committed date for completion of internal infrastructure and amenities, and the consequence of missing it.
24. The amenity schedule: what will be built, to what specification, by when, and at whose cost.
25. The maintenance corpus — how much, who holds it, on what terms, and how it is accounted for.
26. The handover mechanism: when the plot-holders' association is formed, what is conveyed to it, and when.
27. All charges beyond the plot price: development charges, infrastructure charges, club membership, legal and documentation, GST where applicable.

E · TRACK RECORD

- 8. A list of projects completed by the *contracting entity*, with RERA numbers and completion certificates.
- 9. For the Winsten Park credential: confirmation of the individual's role, the dates, and the current RERA status and complaint history of each phase.
- 0. Written confirmation from Architect Hafeez Contractor's practice of the engagement and its scope.

THREE THINGS TO DO REGARDLESS OF THE ANSWERS

Check MahaRERA yourself. Do not accept a screenshot or a number read out over the phone. Search the portal directly — and search the lapsed and abeyance lists too, not only the live register.

Pay nothing before registration exists. Not a token, not a “pre-launch” amount, not an expression of interest, not a refundable booking. Marketing a project over the section 3 thresholds before registration is itself prohibited, and money paid at that stage sits outside the escrow mechanism entirely.

Put everything in writing and keep it. If money has already changed hands, get the receipt, the entity name and the written basis of the payment on record now — while relations are cordial — rather than later, when they may not be.

Conclusion

Six readers, six right answers — and the specific, named triggers that would change any of them.

28

The verdict, by who you are

Figure 19 • The verdict — six different readers, six different right answers

There is no single recommendation here, because the question is not the same for everybody. What is common to all six rows is the trigger: none of these verdicts is permanent, and each one names the specific document that would move it. This is a judgement on the evidence available in February 2026 — not on the people involved, and not on Sindhudurg.

WHO YOU ARE	VERDICT	WHY	WHAT WOULD CHANGE THE ANSWER
Holiday-home end-user Mumbai / Pune, buying to use	WAIT	The district thesis genuinely works for you — access has improved, the coast is beautiful, and entry is a fraction of North Goa. But you cannot buy a plot that has no survey number. Keep Sindhudurg on the list and keep this project on a watchlist.	A MahaRERA number, a sanctioned layout with your plot on it, and a clean title opinion.
Land investor holding for appreciation	WAIT	Most of the appreciation story being sold to you has already happened: Mopa, Chipli, NH-66 and the ferry are delivered and are in today's price. What is left to capture is the announcement tier — and that is the tier with no sanctioned DPR behind it.	Registration, plus a price that stands against the ready-reckoner rate and three verified comparables. Underwrite a 7+ year hold, not a 3-year flip.
NRI buyer	AVOID FOR NOW	You carry every risk above plus two of your own: Indian banks largely will not fund NRI plot purchases, and remote buyers are structurally worst-placed to police title, demarcation and construction quality in a district they cannot visit often.	Everything in the rows above, plus resident representation on the ground and a completed, conveyed plot rather than a promise.
Channel partner / broker	DO NOT SELL YET	Marketing an unregistered project is not a grey area — RERA prohibits advertising, marketing and booking before registration, and the agent is exposed alongside the promoter. Your own MahaRERA agent registration is the thing at stake.	The project's registration number, verified by you on the portal, before a single enquiry is worked.
Co-investor or JV partner in the development itself	DILIGENCE FIRST	A different question entirely, and potentially a real opportunity: the land thesis is sound and the master-planner appointment is credible. But you would be underwriting a ₹389 crore programme against a ₹1 lakh LLP, so the whole exercise is counterparty.	Audited accounts of the land-holding entity, the aggregation status gat by gat, the funding structure, and the full Winsten Park delivery record.
Already in discussions, or has paid a token	STOP & DOCUMENT	Put your questions in writing and keep the replies. Do not pay a further rupee against a project with no registration. If money has already gone, get the receipt, the entity name and the written basis of the payment on record now, while relations are cordial.	Written confirmation of the registration status. MahaRERA's complaint route is open to a buyer even where the project is unregistered.

Basis: the evidence set compiled in Figures 1–18 and the regulatory framework summarised in Figure 12. Not investment, legal or tax advice. Every verdict here is conditional on the public record as at February 2026 and should be revisited the moment a MahaRERA registration, a sanctioned layout or a title opinion becomes available. Readers in or near a transaction should retain a Maharashtra-qualified advocate and an independent registered valuer before acting.

Figure 19. No single recommendation, because the question is not the same for everybody. What is common to all six rows is that none of the verdicts is permanent, and each names the document that would move it.

If the six rows have one thread running through them, it is this. **Sindhudurg deserves the attention it is getting.** The access story is real, the tourism pipeline is unusually well-evidenced for an Indian coastal district, the land is genuinely cheap relative to Goa, and the arbitrage a Mumbai or Pune buyer is being offered is a coherent one. Anyone dismissing the district out of hand is making a mistake.

And **this specific vehicle has not yet supplied what would make it investable.** Not because anything improper has been found — this report found no consumer complaint, no regulatory

action, no adverse finding of any kind against God City LLP or its partners — but because almost nothing checkable has been published, and because the one thing that would change that is free to obtain and has not appeared.

Those two statements are entirely compatible. The correct posture is neither enthusiasm nor dismissal: it is **patience with a checklist.** Keep Sindhudurg on the list. Keep this project on a watchlist. Run G1 monthly — it takes an afternoon. And let the documents, rather than the narrative, decide when to move.

29

What would change this view

A research judgement that cannot be falsified is not worth much. These are the specific, observable events that would move the

assessment in this report, in either direction.

DIRECTION	TRIGGER	EFFECT ON THIS ASSESSMENT
-----------	---------	---------------------------

STRONGLY POSITIVE	A live MahaRERA registration for the project, naming the promoter entity, the phase, the plot count and a committed completion date	Decisive. Collapses risks R1, R2, R4, R5 and R17, opens the escrow protection, and makes the full diligence programme in Figure 14 worth commissioning
POSITIVE	A sanctioned sub-division layout with village and survey numbers, plus a clean independent title opinion	Converts the project from unassessable to assessable. Everything in Part IV becomes checkable against a specific parcel
POSITIVE	Written confirmation from Architect Hafeez Contractor's practice of a current master-planning engagement and its scope	Raises the capability score materially and supports the reading that this is a genuine township rather than a land play
POSITIVE	Disclosure of the land-holding entity with audited accounts, or a named institutional funding partner or landowner joint venture	Addresses R7 directly — the capital-adequacy gap in Figure 16 is a question, and this is the answer to it
POSITIVE	An Integrated Township Project locational clearance	Confirms contiguity and full ownership of 40+ hectares, which is the hardest single thing about this scheme
CONTEXTUAL	A scheduled Mumbai or Navi Mumbai air service actually operating to Chipi; the Chipi runway extension awarded; the Adali pharma hub allotting plots	Strengthens the district thesis for every project in Sindhudurg, this one included. The pharma hub matters most, because it creates local salaried demand
NEGATIVE	Continued marketing and collection of money with no registration through 2026	Moves the reading from “early-stage project” toward “land-marketing exercise”, and should end the enquiry
STRONGLY NEGATIVE	A MahaRERA complaint, suspension or abeyance entry against the project; or an ESA notification covering the site once disclosed; or a title dispute on a project gat number	Each is individually sufficient to stop. The ESA point is why section 18 insists the corridor village list be checked the moment survey numbers appear

THE ONE-LINE SUMMARY

Sindhudurg is a real opportunity with a real clock on it. God City may well become a real project. But as at February 2026 the only honest instruction is the cheapest one: **ask for the registration number, in writing, and do nothing else until it arrives.**

The audit trail

Every material claim with its source and confidence grade; a glossary of the Maharashtra land terms this report relies on; the sources consulted; and an honest account of what could not be checked.

APPENDIX A

Fact register — every material claim, its source and its grade

THE ENTITY AND ITS PROMOTERS

CLAIM	GRADE	SOURCE
GOD CITY LLP, LLPIN ACF-3634, incorporated 6 February 2024, RoC-Kanpur	REGISTER	Ministry of Corporate Affairs LLP master data
Registered office A-118, 4th Floor, Noida, Gautam Buddha Nagar, UP 201301	REGISTER	MCA LLP master data
Total contribution ₹1,00,000; designated partners Rakesh Kumar and Suresh Kumar; status Active	REGISTER	MCA LLP master data
Rakesh Chaudhary: 18+ years in the sector; "directorial experience with the WinstenPark Real Estate Project of VHR Group"	ASSERTED	God City LLP website, About page
Suresh Chaudhary: Delhi University graduate, 14 years in real estate, creator of Delhiwood Pvt. Ltd., producer of the Punjabi film <i>Hard Kaur</i>	ASSERTED	God City LLP website, About page
No consumer complaint, regulatory action or adverse finding located against God City LLP or its partners	REPORTED	General web search and MahaRERA registers, February 2026 — a null result, not a clearance

THE PROJECT AS CLAIMED

CLAIM	GRADE	SOURCE
Integrated luxury township in the "Sindhudurg growth corridor", ~150 acres, luxury plots, villas and studios	ASSERTED	God City LLP website and blog
Master planned by Architect Hafeez Contractor	ASSERTED	God City LLP website; not confirmed by the practice
Channel-partner programme offering project briefs, pricing, availability and approved sales assets	REPORTED	God City LLP website, channel-partner page
No MahaRERA registration, village or survey numbers, layout, price list or possession date in the public domain	REPORTED	MahaRERA project search, lapsed and suspended registers; general web search, February 2026

THE PAST-PROJECT LINEAGE

CLAIM	GRADE	SOURCE
Winsten Park, Plot No. 17, Chauganpur, Knowledge Park V, Greater Noida; ~3.71 acres, 3 towers, ~674 units; studios 590-890 sq ft	REPORTED	Listing-portal project data (SquareYards, 99acres, CommonFloor, RealEstateIndia)
Phase I UPRERAPRJ5008, launched 15 Dec 2015, completion due 14 Dec 2020; promoter of record SKV Infotech Private Limited	REGISTER	UP RERA registration data
Phase II UPRERAPRJ9566, completion due 7 Jul 2021; Phase III UPRERAPRJ11430, completion due 16 Jan 2028	REGISTER	UP RERA registration data
Possession on parts of the scheme reported into November-December 2025	REPORTED	Listing-portal project data

VHR Group established 1986; R. D. Verma with Sanjeev and Nilaksh Verma; 30+ completed projects; Palm Resort (Ghaziabad), Windsor Court (Dehradun, 150 apartments)	REPORTED	VHR Group corporate website and builder profiles
Hafeez Contractor: practice founded 1982, 600+ professionals, Padma Bhushan 2016, 75+ awards; Hiranandani Gardens, The Imperial, The 42, DY Patil Stadium, DLF Cyber City	REPORTED	Practice website and published architectural profiles

THE DISTRICT

CLAIM	GRADE	SOURCE
Area 5,207 km²; population 849,651; density 163/km²; 209,839 households; sex ratio 1,036 (Maharashtra 929); literacy 85.56% (Maharashtra 82.34%)	REPORTED	Census of India 2011
8 talukas, 748 villages, 8 towns; 3 subdivisions; headquarters at Oros / Sindhudurnagari	REPORTED	Sindhudurg district administration
District rainfall ~4,608 mm	REPORTED	District statistical reporting
Swadesh Darshan 2.0 destination; India's first designated tourism district	REPORTED	Ministry of Tourism destination master plan documentation
Cyclone Tauktae (May 2021) the fifth-strongest Arabian Sea storm since 1998; Konkan Disaster Mitigation Project covers Sindhudurg	REPORTED	Maharashtra State Disaster Management Authority; contemporaneous reporting

ACCESS AND CATALYSTS

CLAIM	GRADE	SOURCE
Sindhudurg (Chipi/SDW) FY 2025-26: 73,022 passengers (+398.48%), 1,566 aircraft movements (+200%); Fly91 to Pune, Hyderabad, Bengaluru; runway 2,500 m with extension to ~3,000 m announced	REPORTED	Airport traffic statistics; Fly91 schedules; Maharashtra government announcement, September 2025
Navi Mumbai-Chipi service announced for 15 August 2026; not operating as at February 2026	REPORTED	Fly91 published schedules; contemporaneous reporting
Mopa (GOX) ~14 km from Sawantwadi; 26.6% passenger growth in 2024	ASSERTED	Distance widely reported; growth figure cited in industry material
NH-66 Panvel-Sindhudurg 466 km; district packages P-9 and P-10 ~99% complete; full corridor targeted end-2026 / early-2027	REPORTED	NHAI progress reporting and contemporaneous coverage
Greenfield Konkan Expressway: MSRDC, 389 km six-lane, Chirle to Patradevi, ~₹70,000 crore; revised DPR December 2024; environmental clearance queries pending; alignment reworked to avoid the Western Ghats ESZ	REPORTED	MSRDC project documentation and contemporaneous coverage
Mumbai-Vijaydurg Ro-Ro launched 1 March 2026 (M2M Princess); ~6-7 h against 12 h by road; ₹2,500 economy, ₹4,000 premium, ₹6,000 per car; ~390 passengers and 21 cars on day one; 16 trips planned in month one	REPORTED	Maharashtra Maritime Board and operator announcements; contemporaneous coverage
Konkan Railway: stations at Kankavli, Sindhudurg, Kudal, Sawantwadi; CSMT-Madgaon Vande Bharat from 27 June 2023; ₹1.58 billion electrification package reported June 2026; doubling contested	REPORTED	Konkan Railway Corporation; trade press
IHCL / MTDC tripartite agreement for a Taj hotel at Shiroda-Velagar; land acquired for MTDC in 1994, delayed by compensation issues; site referred to as ~138 acres	REPORTED	IHCL press release; MTDC; the acreage figure appears in a commercial press release and is graded ASSERTED

Submarine tourism and underwater museum: ₹110.58 crore sanctioned; ex-INS Guldar scuttled 19 May 2026 at ~22 m near Nivati Rocks; 24-seater submarine; diving tiers to 12, 18 and 30 m	REPORTED	MTDC and Maharashtra Tourism; contemporaneous coverage
Aerocity at Chipi and a ~200-acre Film City at Nandos village	ASSERTED	Commercial press release and secondary reporting; no sanctioned DPR traced
MIDC pharma hub proposed at Adali Industrial Area, Sawantwadi taluka, with roads, power and water reported laid	REPORTED	MIDC; trade press
Maharashtra Tourism Policy 2024: up to ₹20 crore or 20% capital subsidy for hospitality; 15% or up to ₹15 crore for tourism facilities; SGST reimbursement; electricity-duty exemption; up to 5% interest subsidy; 50 tourism hubs; 30-60 day approvals	REPORTED	Maharashtra Department of Tourism policy documentation

MARKET AND PRICING

CLAIM	GRADE	SOURCE
Kudal residential plots ~₹4 lakh/guntha (₹367/sq ft); 22-guntha parcel at ₹55 lakh (₹2.5 lakh/guntha, ₹230/sq ft)	REPORTED	99acres / RealEstateIndia listings, 2025–26. Listing asks, not transaction prices
Achara (Malvan) sea-face land ~₹3 lakh/guntha (₹275/sq ft)	REPORTED	Listing data, 2025–26
Sindhudurg plots ₹1,000–2,000/sq ft inland; ₹3,000–6,000/sq ft sea-view (2025 estimate)	ASSERTED	Property-marketing sources
Sawantwadi Mopa-side gated layouts ₹7,000–9,500 per sq yd; Cida De Luxora (SSL Realty) 11 acres, 600+ sq yd plots at ₹45–55 lakh against a stated North Goa comparable of ₹1.5–2 crore	ASSERTED	Developer marketing material
Land within 25–30 km of Mopa up 28% in 18 months; district prices up 25–30%; highway-frontage premium 20–30%	ASSERTED	Property-marketing sources and a commercial press release. No conclusion in this report rests on these
India's second-home market ~US\$3.2 bn; retirement and second-home segment to ~US\$4.02 bn in 2026 (~23.6% growth); luxury second-home demand ~20% p.a.; Alibaug / Goa / Lonavala average values ₹9,860–15,000 per sq ft (built property); Alibaug +150% in a decade	ASSERTED	Industry and developer research; not an official statistical series

LAW AND REGULATION

CLAIM	GRADE	SOURCE
MahaRERA registration compulsory where land exceeds 500 m² or plots/apartments exceed eight, all phases inclusive; each phase separately registrable; no advertising, marketing, booking or sale before registration	REGISTER	Real Estate (Regulation and Development) Act 2016, s.3; MahaRERA practice
70% of receipts into a designated account, withdrawals certified by architect, engineer and CA; delay interest under s.18; complaint fees typically ₹1,000–5,000, cases intended to be decided in ~60 days	REGISTER	RERA 2016, ss.4(2)(I)(D) and 18; MahaRERA
MahaRERA holds ~1,750 lapsed projects in abeyance and initiated suspension for ~1,137; 23 Sindhudurg projects in abeyance	REPORTED	MahaRERA registers and contemporaneous coverage
Integrated Township Policy: minimum 40 ha contiguous; all parcels owned by the proponent; ≥15% of residential FSI for social housing; parks, playgrounds and community facilities; 50% stamp-duty concession; up to 50% development-charge exemption; Collector to decide in 45 days	REGISTER	Maharashtra Integrated Township Policy

Section 63, Maharashtra Tenancy and Agricultural Lands Act 1948: non-agriculturist requires the Collector's prior written permission; 2016 amendment carve-outs for Municipal Corporation/Council limits and SPA/NTDA areas with N.A. use allocated	REGISTER	Maharashtra Tenancy and Agricultural Lands Act 1948, s.63; Maharashtra Act No. 1 of 2016
N.A. conversion is a separate process under the Maharashtra Land Revenue Code, requiring 7/12, property card, layout and NOCs, scrutiny, inspection and conversion charges	REGISTER	Maharashtra Land Revenue Code
7/12 Itar Hakk column records kul rights, mortgages, grant conditions, court orders and transfer restrictions; Devasthan land often inalienable; Occupant Class-II requires prior sanction and premium; Maharashtra Private Forests (Acquisition) Act risk	REGISTER	Maharashtra revenue law and settled conveyancing practice
CRZ Notification 2019 zones I-IV; Sindhudurg coast largely CRZ-III B with a 200 m NDZ from the High Tide Line; Sindhudurg CZMP approved 2023; MCZMA is the regulator	REGISTER	CRZ Notification 2019; Sindhudurg Coastal Zone Management Plan
Bombay High Court directed notification of 25 Dodamarg and Sawantwadi villages as an ESA under the Environment (Protection) Act 1986; Maharashtra included ~2,092 villages in draft Western Ghats ESA	REPORTED	Bombay High Court directions as reported; MoEFCC draft notifications
Stamp duty on the higher of agreement value or ready-reckoner rate; registration 1% capped at ₹30,000; RR rates +3.89% average and +3.7% rural for FY 2025-26; rates looked up by district, taluka, village and survey number on e-ASR	REGISTER	Maharashtra Stamp Act; IGR Maharashtra e-ASR; FY 2025-26 notification
Plot loans: 60-75% LTV, 10-15 year tenures, ~8.5-11.5% (2026); residential use within municipal limits typically required; NRIs largely ineligible	REPORTED	Lender product terms and financial-services reporting, 2026

APPENDIX B

Glossary of Maharashtra land and planning terms

TERM	MEANING, AND WHY IT MATTERS HERE
7/12 extract (Satbara)	The core land record for rural Maharashtra, combining the record of rights (Form VII) with the crop register (Form XII). Shows the occupant, the area, the tenure class and encumbrances. The first document to ask for, and the one indexed by survey number.
8-A extract	The account of a holder's total land in a village. Used alongside the 7/12 to confirm holdings and to cross-check ceiling and tenancy positions.
Gat number / survey number	The cadastral identifier for a parcel. Nothing — no title search, no CRZ check, no ESA check, no valuation — can be done without it. Its absence is the reason Figure 13 stops at question three.
Itar Hakk	The "other rights" column on the 7/12. Records tenancy, mortgages, government interest, grant conditions, court orders and any requirement for the Collector's permission to transfer. A blank column is good news; an entry is a stop sign.
Kul / Kul Kayda / section 32G	Tenancy law giving long-term tenant farmers security of tenure and a statutory route to ownership. A 32G entry records that process. Deleted tenant entries without a proper certificate warrant close scrutiny.
Inam / Watan / Devasthan	Historic grant tenures. Devasthan land is held for a religious institution and is frequently inalienable; where transfer is possible it needs government permission and typically Charity Commissioner approval.
Occupant Class-I / Class-II	Class-I is unrestricted tenure. Class-II ("new tenure") is restricted — granted or converted subject to conditions, requiring prior sanction and usually a premium before resale. A sale without sanction can be void.
N.A. (non-agricultural) order	Permission under the Maharashtra Land Revenue Code converting land from agricultural to a specified non-agricultural use. Buying land lawfully does not make it buildable; this does.
Ready reckoner rate (e-ASR)	The government's notified minimum value for a property, by district, taluka, village and survey number. Stamp duty is charged on the higher of this or the agreement value, and it is the cheapest independent sanity check on a quoted price.
Guntha	Local land unit. 1 guntha = 1,089 sq ft ≈ 101.2 m²; 40 guntha = 1 acre. Konkan land is quoted per guntha far more often than per square foot.
CRZ / CZMP / NDZ / HTL	Coastal Regulation Zone; the Coastal Zone Management Plan that maps it (Sindhudurg's approved in 2023); the No-Development Zone within it (200 m in CRZ-III B); measured from the High Tide Line. Creeks and tidal rivers draw inland land into the plan too.

ESA / ESZ	Ecologically Sensitive Area or Zone, notified under the Environment (Protection) Act 1986. Relevant here through the Western Ghats process and the directed Sawantwadi-Dodamarg 25-village corridor.
ITP	Integrated Township Project under Maharashtra's township policy. Minimum 40 ha contiguous, all parcels owned by the proponent, ≥15% of residential FSI for social housing, in exchange for stamp-duty and development-charge concessions.
FSI	Floor Space Index — the ratio of permissible built-up area to plot area. The social housing obligation under the ITP is expressed as a share of residential FSI, not of land.
Designated account (70% escrow)	The account into which 70% of a registered project's receipts must be deposited, with withdrawals certified by architect, engineer and chartered accountant. It exists only after registration.
Abeyance / lapsed project	MahaRERA's status for registrations that have expired without completion or extension. Twenty-three Sindhudurg projects currently sit in this category — a list worth checking alongside the live register.
CAM / maintenance corpus	Common area maintenance, and the fund meant to pay for it after handover. In plotted development this is where schemes most often fail quietly, years after the last plot is sold.

APPENDIX C

Sources consulted

CORPORATE AND REGULATORY REGISTERS

- Ministry of Corporate Affairs — LLP master data, GOD CITY LLP (LLPIN ACF-3634)
- MahaRERA — project search; list of lapsed projects; projects suspended or in abeyance; deregistered projects; registrations revoked or void *ab initio*
- Uttar Pradesh RERA — project registrations UPRERAPRJ5008, UPRERAPRJ9566, UPRERAPRJ11430
- Inspector General of Registration, Maharashtra — e-ASR ready reckoner; FY 2025-26 rate notification

STATUTES, POLICY AND CASE LAW

- Real Estate (Regulation and Development) Act 2016 — ss.3, 4, 13, 18
- Maharashtra (Bombay) Tenancy and Agricultural Lands Act 1948 — ss.43, 63; Maharashtra Act No. 1 of 2016
- Maharashtra Land Revenue Code — non-agricultural conversion
- Maharashtra Integrated Township Policy
- Coastal Regulation Zone Notification 2019; Sindhudurg Coastal Zone Management Plan (approved 2023); Maharashtra Coastal Zone Management Authority
- Environment (Protection) Act 1986 and Rules 1986; MoEFCC Western Ghats ESA draft notifications
- Bombay High Court directions on the Sawantwadi-Dodamarg wildlife corridor
- Maharashtra Private Forests (Acquisition) Act
- Maharashtra Tourism Policy 2024
- Maharashtra Stamp Act — duty and registration charges

GOVERNMENT AND STATUTORY BODIES

- Census of India 2011 — Sindhudurg district tables
- Sindhudurg district administration — administrative divisions, tourism
- Ministry of Tourism — Swadesh Darshan 2.0 destination master plan for Sindhudurg
- Maharashtra Tourism Development Corporation — submarine tourism and underwater museum; Shiroda-Velagar

- Maharashtra Industrial Development Corporation — Adali and Kudal industrial areas
- National Highways Authority of India — NH-66 Panvel-Sindhudurg
- Maharashtra State Road Development Corporation — greenfield Konkan Expressway DPR and clearance status
- Konkan Railway Corporation — services, electrification, doubling
- Maharashtra Maritime Board — Mumbai-Vijaydurg Ro-Ro
- Airports Authority of India / Sindhudurg Airport — traffic statistics; Manohar International Airport, Mopa
- Maharashtra State Disaster Management Authority — Konkan Disaster Mitigation Project; hazard profiles

COMPANY AND PROJECT SOURCES

- Indian Hotels Company Limited — press room, Shiroda announcement
- SSL Realty / Cida De Luxora — project and pricing material

LISTING PORTALS AND MARKET DATA

- 99acres, SquareYards, RealEstateIndia, CommonFloor, NoBroker, Clicbrics, QuikrHomes — Sindhudurg and Greater Noida listings and project pages
- CREDAI Sindhudurg — district builder information

PRESS AND TRADE REPORTING

- Business Standard, Free Press Journal, Hindustan Times, Deccan Herald, The Print / ANI, Lokmat Times, Outlook Traveller, Travel Trends Today, BioSpectrum India, Indian Infrastructure, Construction World

COMMERCIAL AND MARKETING SOURCES — USED ONLY WHERE LABELLED

ASSERTED

- Cida De Luxora, Totl Realty, Avani Infratech, Konkan Estates, 2Bigha, 1acre.in, Edge Developments, ghar.tv and similar property-marketing publications

Every source above was consulted in February 2026 through public web search. Where this report could not reach a primary portal directly, the claim is graded accordingly and the limitation is stated in Appendix D. Nothing in this report reproduces confidential, privileged or non-public material.

Method, scope and limitations

What was done

Systematic public-domain research, conducted in February 2026, covering: the promoter's own published material; corporate registry data; MahaRERA and UP RERA registers; the statutory and policy instruments listed in Appendix C; district and Census data; infrastructure and tourism project reporting; listing-portal price data for Sindhudurg and for the Greater Noida comparable; and secondary market commentary. Findings were assembled into the nineteen figures, each of which carries its own source line, and into the fact register at Appendix A.

What was not done, and it matters

- **No site visit.** No parcel has been identified, so none was possible. Even if one had been, a single dry-season visit would not answer the drainage and water questions raised in section 08.
- **No interviews.** The promoter, the architect's practice, VHR Group, SKV Infotech, MahaRERA officials, local advocates and Sindhudurg brokers were not approached. Several of the open questions in this report would be answered quickly by a conversation, and section 27 is written to make those conversations productive.
- **No document inspection.** No 7/12 extract, title deed, layout, approval or agreement was examined, because none is public.
- **No physical search of registers.** Sub-registrar transaction data, the e-ASR rate for any specific village, and the Collector's records were not physically searched. Doing so requires survey numbers.
- **Portal access was partly indirect.** Some primary portals could not be retrieved directly in this research environment; where a claim rests on secondary reporting of a primary record, it is graded **REPORTED** rather than **REGISTER**, and readers should verify it at source before relying on it.

Known weaknesses in the evidence base

Listing asks are not transactions. Every price in Figures 5 and 6 that is anchored to a listing is an asking price. In thin rural markets these can sit materially above achieved values and can persist unsold for long periods. The ready-reckoner rate and registered comparables are the corrective, and both require survey numbers.

Several market statistics originate with interested parties. The "+28% within 25-30 km of Mopa", the "25-30% district-wide", the "20-30% highway frontage premium" and the North Goa

comparison all come from firms selling plots in this market. They are reported here because they form part of the information environment, they are labelled every time, and no conclusion rests on them.

Two constructed models carry assumptions, not facts. The ₹389 crore capital build-up in Figure 16 and the land budget in Figure 15 are this report's own estimates from stated assumptions. They are intended to establish magnitude — a township of this scale needs hundreds of crores, and roughly half of any such site is not saleable — and they should not be quoted as findings about this project's actual cost plan or layout.

Scores are judgements. The capability profile in Figure 9 and the risk register in Figure 10 are this report's assessments, shown with their reasoning precisely so that a reader who disagrees can substitute their own and see what changes.

Three things this report explicitly does not claim

It does not claim the project will fail. A well-capitalised, well-advised township could be built on exactly this thesis, and the master-planner appointment suggests that may be the intent.

It does not allege wrongdoing. No complaint, regulatory action or adverse finding was located against God City LLP or its partners. A null result is not a clearance, but neither is it an accusation, and it should not be read as one.

And it does not claim the documents do not exist. "Not found in the public domain" means a search was run and returned nothing. A promoter may hold every document listed in section 27 and simply not publish it. The purpose of this report is to identify precisely which documents would resolve the uncertainty — and to make asking for them straightforward.

DISCLAIMER

This document is independent research prepared for information only. It is not investment, legal, tax or valuation advice, and it is not an offer, solicitation or recommendation to buy or sell any property or interest. It reflects public information available in February 2026 and may become inaccurate without notice. No relationship exists between the author of this report and God City LLP, its partners, VHR Group, SKV Infotech Private Limited, Architect Hafeez Contractor, or any other party named. Anyone considering a transaction should obtain independent advice from a Maharashtra-qualified advocate, an independent registered valuer and a qualified tax adviser, and should verify every fact stated here at its primary source.

God City, Sindhudurg — project and promoter research report. Compiled February 2026. Nineteen figures. All monetary figures in Indian rupees; lakh = 100,000, crore = 10,000,000. Land conversions: 1 guntha = 1,089 sq ft; 1 acre = 40 guntha = 43,560 sq ft; 1 hectare ≈ 2.471 acres.
