

THE OPPORTUNITY

India's largest housing market clears 13,000 transactions a month — and almost none of them are advised by anyone who has read the record.

₹6,968 cr

selection beats speculation

MUMBAI PROPERTY REGISTRATIONS PER MONTH · 2026

Source: Knight Frank / IGR monthly releases. Jan–May apportioned to the published H1 total.

WHY THIS IS AN OPENING, NOT A CROWD

- Every registration is a **dated, public, addressable** instrument. IGR e-Search is free and covers Mumbai back to 1985.
- 42,865 registered agents in Maharashtra — almost none of them work from the registered record.
- The market is busy *and* oversupplied. That is precisely the condition where advice is worth paying for.

THE FOUNDER

I have already built a business from zero, and I already sell real estate.

Not a first-time entrant with a thesis. An operator with a P&L, an audience and twenty-four years of family context to draw on.

SHEESHAM.IN — QUARTERLY SALES, 100% BOOTSTRAPPED

MY OWN PRESENCE

19 posts · audience built on explanation, not listings

Twenty-four years of family context

- **Chanda Properties** — family real-estate firm in Jaipur, trusted realtors since 2002.
- **~310 acres** of family land inheritance.
- **124 acres** owned by my father, currently being developed as a scheme/township.

FAMILY CONTEXT — NOT MY ASSETS

Context and access. The track record above is mine.

THE VISION

I am not trying to become a broker. I am trying to become a builder — and brokerage in Mumbai is the fastest way to earn the capability, the network and the capital to do it.

Each stage funds and de-risks the next. Nothing here requires a leap — only that the previous stage actually worked.

THE OPPORTUNITY, SIZED HONESTLY

A large market — but we do not need the whole market.

Every strategy document that stops at the top bar is selling optimism. The only number that matters is the one at the bottom.

We do not need the market to grow. We need 15 transactions out of 80,000.

Corridor share, pocket share and intermediation rate are analyst estimates — the 90-day pilot exists to replace them with measurements.

THE MODAL TRANSACTION

**500–1,000 sq ft
above ₹1 crore**

81% of registrations are flats of 1,000 sq ft or less. Homes above ₹1 crore have risen from 49% to 54% of sales in a year.

The market is small and expensive at the same time. That is a **selection** problem, and selection is what an evidence-led desk sells.

WHERE WE START

One corridor. Five localities. Twenty-five pockets. Frozen for ninety days.

Eastern & Central Suburbs

Powai · Kanjurmarg · Vikhroli · Bhandup · Mulund · Ghatkopar

- One contiguous belt, reachable end to end inside an hour — the binding constraint for a single founder is travel time, not market size.
- An operating employment catchment: Mumbai added 6.0 mn sq ft of office absorption in H1 2026, with fresh completions concentrated in Powai, Thane and Navi Mumbai.
- A live metro alignment (Line 6, JVLR) plus the Eastern Express Highway spine.
- Advisory whitespace the Western suburbs no longer offer.

Expansion is sequenced and conditional — Thane, then Navi Mumbai — and only once corridor-1 closures happen **without me present at every step.**

WHY THIS CORRIDOR

Seven weighted metrics, one weight vector, applied to every corridor in MMR.

WEIGHTED TOWARD EXECUTION

A single founder cannot compensate for a weak axis by hiring a specialist. **Execution simplicity** and **entry cost** together carry 0.28 — as much as transaction depth and infrastructure combined.

INFRASTRUCTURE BY STATUS

An operating asset scores 1.00; a commissioning one 0.75; a mere approval 0.25. Scoring an **announced** metro like a running one is the most common error in Indian micro-market research.

ENTRY COST, INVERTED

Lower ticket means a faster first closure and less client risk. It is scored as a benefit, not a penalty.

WHITESPACE, RE-BASED

Measured against the **42,865 registered agents** in Maharashtra — not against a feeling about how competitive a suburb is.

THE SCORECARD

Eastern & Central wins by having no weak axis — not by leading any single one.

Analyst model. Scores are 1–10 judgements against the evidence base; weights encode one strategy — a single founder needing a first closure inside two quarters.

The Western Suburbs win transaction depth outright with a 10 — and still finish fourth. A 4 on whitespace is what a new entrant actually experiences on their first day of calling.

Navi Mumbai and Western tie at 7.48. The tie breaks toward Navi Mumbai on whitespace. Where the model cannot separate two options, saying so is more useful than inventing a third decimal.

The recommendation survives being wrong. Across 5,000 randomised weight vectors — every weight jittered ±50% — Eastern & Central stays first 99% of the time.

THE OPERATING MODEL

Seven steps, one loop. The loop is the whole business.

Every closure re-enters at step 1 as proprietary evidence — closed prices, objections, society rules, true commute.

This is the compounding loop. It costs nothing to build and it is the only asset a better-funded competitor cannot simply buy.

ACQUIRE

Referral network and pocket briefs first — the cheapest channels are the slowest to build and the hardest for anyone to buy.

QUALIFY

Budget, timeline, decision authority and area fit. All four, or it is an enquiry, not a lead.

TRANSACT

Registered comparables normalised to carpet area. Evidence moves sellers who have anchored on a neighbour's 2023 number.

CAPTURE

Closed price against asking, objections, society rules, real maintenance. No public source has this.

THE ECONOMICS

2,860 founder hours → 15 closures → ₹45.7 L gross → ₹32.6 L post-tax.

₹32.6 L

post-tax to founder in Year 1

≈ ₹1,140 per founder hour — the honest comparator to a salary

Costs: ₹4.2 L operating + ₹0.5 L one-off setup. GST is an output tax; 2% TDS under 194H is creditable.

YEAR-1 OUTCOME BY SCENARIO · ₹ lakh

₹1,140 per founder hour, post-tax. That is the honest comparator to a salary, and it is what Year 1 is actually worth. The case for doing it anyway is Years 2–6, not Year 1.

₹11.3 lakh of capital, raised against the conservative case. The trough is month 6–8. Founder drawings are the largest line in the burn and the main lever on it.

Almost no capital at risk. Brokerage converts knowledge into cash inside twelve months without inventory, land or debt — which is exactly why it funds the next stage.

FIRST 90 DAYS

From zero to first repeatable transactions — with one hard gate in the middle.

COMPLIANCE GATE · no advertising, listing or client work before this line

The Certificate of Competency became mandatory in January 2026. A MahaRERA agent cannot register or renew without a 20-hour programme and an examination. It is a six-week critical path that no amount of effort compresses — so it is booked in week 1, before the market research, and the research happens while the clock runs.

30+

qualified leads by day 90

5+

accompanied site-visit cycles

MONTHS 3 TO 12

Build the Mumbai engine, then widen — but only on evidence.

Deepen before widening. If corridor-1 conversion is weak, adding a second corridor does not fix it — it buys a second place to be mediocre and doubles the travel.

The expansion gate at month 8: corridor-1 economics repeat, closures happen without me at every step, referral coefficient above 0.5, and twelve months of runway still intact.

What exists at month 12 that money cannot buy: twenty-five pockets known at unit level, a registered-price series nobody else built, and a record of why eleven buyers walked away.

THE END GAME

Build in Mumbai. Learn. Compound. Develop. Then build in Jaipur.

Brokerage is the entry vehicle, not the destination.

Each stage funds the next and de-risks it. The capability compounds; the market changes; the family ecosystem waits.

HARDEST MARKET TEACHES FASTEST

Capability built against Mumbai's volume, regulator and buyers transfers down-market. The reverse is not true.

CAPITAL WITHOUT DILUTION

Brokerage converts knowledge into cash with almost nothing at risk. Development needs capital — this is how it gets funded.

THE NETWORK IS THE ASSET

Developers, lenders, lawyers, brokers. The relationships that make a first project possible are made across a hundred transactions.

JAIPUR WILL STILL BE THERE

The family ecosystem is 24 years old and is not going anywhere. What is scarce is the capability to build.
